

ELECYLINDER®
Rotary Type

EC-RTB4 EC-RTC9/12/18

Simple & Wireless Operation
2 Position Actuator

2-point positioning

Built-in controller

ELECYLINDER[®] ROTARY TYPE EC-RTB4 / RTC9 / RTC12 / RTC18

Smooth stopping without impact

ELECYLINDER allows the acceleration (A), velocity (V), and deceleration (D) to be set using numeric values. This allows the deceleration speed to be adjusted for smooth stopping without impact.

Circuit board turnover system

The rotary cylinder turns over circuit boards carried by conveyor A, and loads them on conveyor B

▼ Watch the video here.

Conventional system (air rotary)

High speed impact

Can be bolted from the top

Installation bolt size

RTB4: M4
RTC9: M6
RTC12: M8
RTC18: M8

* Bolts should be prepared by the customer.
* EC-RTB4 does not have through holes.

NEW! Small size rotary EC-RTB4

Vertical types with greatly reduced footprint have been added to the lineup.

Space saving

The footprint has greatly been reduced.

By mounting the built-in motor vertically, the footprint has been reduced

Large hollow shaft

The $\phi 12$ hollow shaft allows easy arrangement for wiring and piping.

Symmetric design

The rotary's rotation center is located in the center of the main unit, allowing for well-balanced mounting.

Easy programming due to the wireless teaching controller

Wireless teaching controller

Easy setting	
Level	Velocity (V)
Forward (F)	10
Backward (B)	8

Easy setting (10 steps)

AVD setting			
%	A	V	D
F	30	70	20
B	80	100	50

AVD (Acceleration, Velocity and Deceleration) setting

Cycle time	
	Time (S)
Forward (F)	0.7
Backward (B)	1.2

Cycle time displayed

No cable connection

Operate from a remote location

Connectable up to 16 axes

The wireless teaching controller is capable of

- * Basic setting (positions, acceleration, velocity and deceleration)
- * Reading the current position, * Test run
- * Jog motion, * Brake release
- * Motor power ON/OFF
- * Cycle time display
- * Error display, * Alarm reset

Communication with the wireless teaching controller is possible when the ELECYLINDER® is of the wireless communication specification (Model code: WL) and wireless axis operation specification (Model: WL2). If the wireless option is not selected, communication is not possible. (Same as the products purchased before)

[NEW!] EC-RTB4

ELECYLINDER® NPN specification is standard. PNP option is available

Table of Specifications

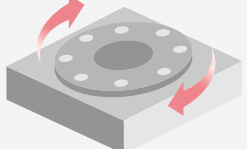

EC-RTB4	EC-RTC9	EC-RTC12	EC-RTC18
			
			

1 Operation range

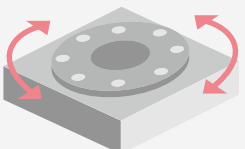

* The belt length indicates rotational angles that can be operated.

2 The maximum speed (rotation speed)

3 Allowable inertia moment

* The allowable inertia moment changes according to the rotation speed.

Type	Operation range (degree) and maximum speed (degrees/s) * The belt length = operation range. * Numbers in the belt = maximum speed.	Maximum torque (N-m)	Allowable inertia moment (kg-m ²)	Reference page
RTB4	330	0.6	0.011	p7
RTC9	600	1.5	0.02	p11
RTC12	600	8.0	0.13	p15
RTC18	450	25.2	0.49	p19

Energy-saving setting

EC-RTC12 can select enable/disable for energy-saving setting by parameter (No. 8). The enable setting will reduce the power consumption by up to 40%, compared to that for the disable setting. On the other hand, the maximum speed, maximum accel/deceleration speed and payload will be reduced compared to that for the disable setting. If disabled, maximum speed and maximum accel/deceleration and payload will become larger compared to that of the enable setting. Refer to the "Payload by speed, acceleration" and "Maximum speed by stroke" in the product specification page. The factory default setting for the energy-saving is disabled.

Factory setting

Mode	Parameter name/description	Features
Power mode	Energy-saving setting disabled	High performance
Energy-saving mode	Energy-saving setting enabled	High energy-saving effect

Automatic servo OFF function

The Automatic servo OFF function can be set by the PC teaching software (IA-OS) or teaching pendant (TB-02/03).

When the automatic servo OFF function is set, after positioning is complete or stopped, the servo will be turned OFF after a prescribed time (delay time). When the next move command is input, servo will be automatically turned ON and positioning motion will be executed.

Because the holding current does not flow while stopping, power consumption can be reduced.

Rotary selection steps

The following conditions must be applied for use. Calculate and check the following values (procedures 1 and 2). When an optional shaft adaptor or table adaptor is mounted, add mass and inertia moment.

Procedure 1

Check the moment of inertia: (1) If there is no load torque, (2) If there is load torque

*The method for checking the moment of inertia differs depending on whether or not there is a load torque.

(1) If there is no load torque...

When used as shown in the figure below, there will be no load torque due to gravity. Therefore, calculate the moment of inertia of the load only, and then confirm that it does not exceed the allowable inertia moment. Use the calculation method for the applicable typical shape to calculate the moment of inertia for the tooling or workpiece that will be used (See the next page).

Example 1

Center mass location of load: Output shaft center
Installation orientation: Horizontal on flat surface/suspended

Example 2

Center mass location of load: Output shaft center
Installation orientation: On side/vertical

Example 3

Center mass location of load: Offset from output shaft center
Installation orientation: Horizontal on flat surface/suspended

(2) If there is load torque...

When used as shown in the figure below, there will be load torque due to gravity. This will cause the allowable moment of inertia to decrease by that amount. First, calculate the load torque and obtain the corrected allowable moment of inertia. Then, calculate the moment of inertia and confirm that it does not exceed the corrected allowable moment of inertia.

Example

Center mass location of load: Offset from output shaft center
Installation orientation: On side/vertical

Step 1 Calculate load torque T

$$T = mgr \times 10^{-3}$$

T : Load torque [N·m]

m : Weight of transported object [kg]

g : Gravitational acceleration [m/s²]

r : Center mass location of transported object [mm]

Step 2 Calculate allowable moment of inertia correction factor C_j

$$C_j = \frac{T_{max} - T}{T_{max}}$$

T_{max}: Output torque [N·m]

*See the individual product pages for the value of output torque T_{max}.

Step 3 Calculate corrected allowable moment of inertia Jtl

$$Jtl = J_{max} \times C_j$$

J_{max}: Allowable inertia moment (kg·m²)

*See the individual product pages for the value of allowable moment of inertia J_{max}.

Step 4 Check moment of inertia of transported object

Use the "formulas for calculating moment of inertia of typical shapes" below to calculate the moment of inertia of the load, and confirm that it does not exceed the corrected moment of inertia calculated during Step 3.

Procedure 2

Check the moment load and thrust load

Confirm that the moment load and thrust load on the output shaft are within the allowable range. If used in excess of the allowable range, it could shorten product life or cause failure.

*See the individual product pages for the values of the allowable dynamic thrust load and allowable dynamic load moment.

Formulas for calculating moment of inertia of typical shapes

1. When the rotational axis passes through the center of the object

(1) Moment of inertia of cylinder 1

*The same formula can be applied irrespective of the height of the cylinder (also for circular plate)

$$\langle \text{Formula} \rangle J = M \times (D \times 10^{-3})^2 / 8$$

Moment of inertia of cylinder: J (kg·m²)
Cylinder weight: M (unit: kg)
Cylinder diameter: D (mm)

(2) Moment of inertia of cylinder 2

$$\langle \text{Formula} \rangle J = M \times ((D \times 10^{-3})^2 / 4 + (H \times 10^{-3})^2 / 3) / 4$$

Moment of inertia of cylinder: J (kg·m²)
Cylinder weight: M (kg)
Cylinder diameter: D (m)
Cylinder length: H (mm)

(3) Moment of inertia of prism 1

*The same formula can be applied irrespective of the height of the prism (also for rectangular plate)

$$\langle \text{Formula} \rangle J = M \times ((A \times 10^{-3})^2 + (B \times 10^{-3})^2) / 12$$

Moment of inertia of prism: J (kg·m²)
One side of prism: A (mm)
One side of prism: B (mm)

2. When the center of the object is offset from the rotational axis

(4) Moment of inertia of cylinder 3

*The same formula can be applied irrespective of the height of the cylinder (also for circular plate)

$$\langle \text{Formula} \rangle J = M \times (D \times 10^{-3})^2 / 8 + M \times (L \times 10^{-3})^2$$

Moment of inertia of cylinder: J (kg·m²)
Cylinder weight: M (kg)
Cylinder diameter: D (m)
Distance from rotational axis to center: L (mm)

(5) Moment of inertia of cylinder 4

$$\langle \text{Formula} \rangle J = M \times ((D \times 10^{-3})^2 / 4 + (H \times 10^{-3})^2 / 3) / 4 + M \times (L \times 10^{-3})^2$$

Moment of inertia of cylinder: J (kg·m²)
Cylinder weight: M (kg)
Cylinder diameter: D (m)
Cylinder length: H (mm)
Distance from rotational axis to center: L (mm)

(6) Moment of inertia of prism 2

*The same formula can be applied irrespective of the height of the prism (also for rectangular plate)

$$\langle \text{Formula} \rangle J = M \times ((A \times 10^{-3})^2 + (B \times 10^{-3})^2) / 12 + M \times (L \times 10^{-3})^2$$

Moment of inertia of prism: J (kg·m²)
Prism weight: M (kg)
One side of prism: A (mm)
One side of prism: B (mm)
Distance from rotational axis to center: L (mm)

(Note) The power · I/O cable is a robot cable. Specify the cable length in □□□. (e.g., 010=10m)

POINT Selection Notes

- Output torque decreases as rotation speed increases. Refer to the "correlation diagram between rotation speed and output torque" for details.
- The allowable moment of inertia of a workpiece being rotated will vary depending on the rotation speed. Refer to the "correlation diagram between rotation speed and output torque" for details.
- The brake is used for retention purposes only. Do not use it for braking or emergency stopping.
- When selecting, calculate values as described in "Selection Method (from P5)" and check the usage conditions.
- If performing push-motion operations, refer to the "correlation diagrams between push force and current limit". The push forces listed are for reference only.

Main Specifications

Item	Description	
Deceleration ratio	1/10.5	
Maximum torque (N·m)	0.6	
Speed/Acceleration/Deceleration (degree/s)(Note7)	Maximum speed (degree/s)	600
	Minimum speed (degree/s)	20
	Rated acceleration/deceleration (G)	0.3
	Maximum acceleration/deceleration (G)	0.5
Brake	Brake specification	non-excitation actuating solenoid brake
	Brake holding torque (N·m) (Note 8)	0.5
Operation range (degrees)	330	

(Note 7) 1G=9807 degrees/s²

(Note 8) Allowable inertia moment and brake holding torque are not necessarily compatible. Confirm that the load torque is less than the brake holding torque.

Item	Description
Driving system	Timing belt
Positioning repeatability	±0.05 degrees
Homing method	Mechanical stopper system
Home return accuracy	±0.05 degrees
Backlash (Note 9)	0.15 degrees
Allowable thrust lead	100N
Dynamic allowable load moment (Note 10)	1.5N·m
Allowable inertia moment	0.011kg·m ²
Radial rotation runout	0.1mm or less
Thrust rotation runout	0.1mm or less
Ambient operating temperature, humidity	0-40°C, 85%RH or less (non-condensing)
Degree of protection	IP20
Vibration/shock resistance	4.9m/s ²
Overseas standards	CE marking, RoHS directive
Motor type	Stepper motor (□28) (Power capacity: Maximum 2A)
Encoder type	Incremental (standard) /battery-less absolute
Number of encoder pulses	16384 pulse/rev

(Note 9) Due to the timing belt driving system, there is no mechanical backlash. However, there is a hysteresis loss due to the timing belt stretching.

(Note 10) 0.5N·m for the side and vertical mount.

Rotary type moment direction

Correlation diagram between speed and output torque, allowable moment of inertia

Correlation diagram between rotation speed and output torque

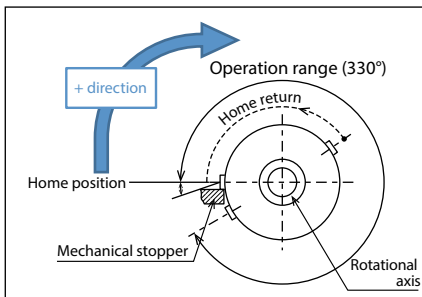

Correlation diagram between rotation speed and allowable moment of inertia

(Note) 0.5G can be used only when horizontal/suspended.

Homing method and positive rotation direction

330-degree rotation specification

The positive rotation direction will be clockwise when viewing the rotating part from above. During home return motion, it rotates counterclockwise. It detects the mechanical stopper position, moves in reverse, and then stops.

(Note) For the non-motor end specification, all movement directions are in reverse.

Guideline for load shape and mass

■ When the center of gravity of a circular plate load is the same as the rotational center of the output shaft

Acceleration 0.3G

■ When the center of gravity of the load is offset from the rotational center of the output shaft

Acceleration 0.3G

S6 ~ S7	6 ~ 7m	✓	✓
S8 ~ S10	8 ~ 10m	✓	✓

(Note 4) If RCON-EC connection specification (ACR) is selected as an option.
 (Note) Robot cable.

POINT
Selection Notes

- (1) Output torque decreases as rotation speed increases. Refer to the "correlation diagram between rotation speed and output torque" for details.
- (2) The allowable moment of inertia of a workpiece being rotated will vary depending on the rotation speed. Refer to the "correlation diagram between rotation speed and allowable moment of inertia" for details.
- (3) The brake is used for retention purposes only. Do not use it for braking or emergency stopping.
- (4) When selecting, calculate values as described in "Selection Method (from P. 5)" and check the usage conditions.
- (5) If performing push-motion operations, refer to the "correlation diagrams between push force and current limit". The push forces listed are for reference only.
- (6) The maximum acceleration/deceleration is 0.7G when horizontal/suspended or 0.5G when on side/vertical with the energy-saving setting disabled, or 0.5G when horizontal/suspended or 0.3G on side/vertical with the energy-saving setting enabled.

Main Specifications

Item	Description	
Deceleration ratio	1/45	
Maximum torque (N·m)	8.0	
Speed/Acceleration/Deceleration (degree/s)(Note 5)	Maximum speed (degree/s)	600
	Minimum speed (degree/s)	20
	Rated acceleration/deceleration (G)	0.3
	Maximum acceleration/deceleration (G) (note 6)	0.6
Brake	Brake specification	non-excitation actuating solenoid brake
	Brake holding torque (N·m) (Note 7)	5.3
Operation range (degrees)	330	

(Note 5) 1G=9807 degrees/s²

(Note 6) Horizontal only. The maximum acceleration/deceleration will be 0.3G when on side/vertical.

(Note 7) Allowable inertia moment and brake holding torque are not necessarily compatible. Confirm that the load torque is less than the brake holding torque.

Item	Description
Driving system	Hypoid gear + timing belt
Positioning repeatability	±0.01 degrees
Homing method	Mechanical stopper method
Home return accuracy	±0.01 degrees
Backlash	0.2° or less
Allowable thrust lead	400N
Dynamic allowable load moment (Note 8)	18N·m
Allowable inertia moment	0.13kg·m ²
Radial rotation runout	0.1mm or less
Thrust rotation runout	0.1mm or less
Ambient operating temperature, humidity	0-40°C, 85%RH or less (non-condensing)
Degree of protection	IP20
Vibration/shock resistance	4.9m/s ²
Overseas standards	CE marking, RoHS directive
Motor type	Stepper motor (□42) (Power capacity: Maximum 2A)
Encoder type	Incremental /battery-less absolute
Number of encoder pulses	800 pulse/rev

(Note 8) 12N·m when on side/vertical.

Rotary type moment direction

Correlation diagram between speed and output torque, allowable moment of inertia

Correlation diagram between rotation speed and output torque

Energy-saving setting disabled (power mode)

Energy-saving setting enabled (Energy saving mode)

Correlation diagram between rotation speed and allowable moment of inertia

Energy-saving setting disabled (power mode)

Energy-saving setting enabled (Energy saving mode)

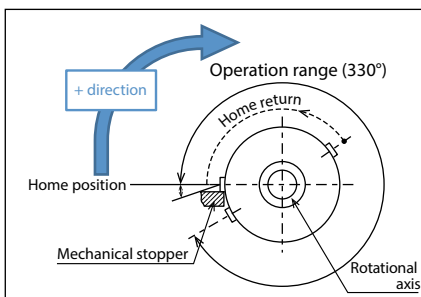

(Note) 0.7G can be used only when horizontal/suspended.

(Note) 0.5G can be used only when horizontal/suspended.

Homing method and positive rotation direction

330-degree rotation specification

The positive rotation direction will be clockwise when viewing the rotating part from above. During home return motion, it rotates counterclockwise.

It detects the mechanical stopper position, moves in reverse, and then stops.

(Note) For the non-motor end specification, all movement directions are in reverse.

■ When the center of gravity of a circular plate load is the same as the rotational center of the output shaft

Acceleration 0.3G [energy-saving setting disabled (power mode)]

Acceleration 0.7G [energy-saving setting disabled (power mode)]

Acceleration 0.3G [energy-saving setting enabled (Energy saving mode)]

Acceleration 0.5G [energy-saving setting enabled (Energy saving mode)]

■ When the center of gravity of the load is offset from the rotational center of the output shaft

Acceleration 0.3G [energy-saving setting disabled (power mode)]

Acceleration 0.7G [energy-saving setting disabled (power mode)]

Acceleration 0.3G [energy-saving setting enabled (Energy saving mode)]

Acceleration 0.5G [energy-saving setting enabled (Energy saving mode)]

Mass

Item	Description	
Mass	Without brake	6.16kg
	With brake	6.54kg

Applicable controllers

(Note) The EC series is equipped with a built-in controller. Please refer to P29 for more information on built-in controllers.

Options

RCON-EC connection spec. *TMD2 and PN options cannot be selected at the same time as ACR (ACR option includes Split power and controller power spec)

Model **ACR** **Applicable models** **All models**

Description This option is for connecting field networks via RCON-EC. This option provides split power and controller power specification. The input/output specification is fixed to NPN, so it cannot be selected simultaneously with the TMD2 and PN options.

Brake

Model **B** **Applicable models** **All models**

Description This option is for holding the fingers at the time of power OFF or servo OFF.

Cable exit orientation

Model **CJB / CJL / CJR / CJT** **Applicable models** **EC-RTB4**

Description The exit orientation of the actuator cable can be changed to top, bottom, left and right.

External stopper

Model **ES** **Applicable models** **EC-RTC18**

Description Stopper for dedicated use of push stop. The stop position can be freely adjusted by mounting the stopper at any position.
 (Note 1) The external stopper is a dedicated stopper for push motion (including homing operation). Do not use it for positioning operation. If used in positioning operation, the stopper may be damaged or misaligned, causing an unexpected accident.
 (Note 2) When adjusting both the forward/backward ends, the second stopper block should be ordered as a single item. (The push operation is for one direction only. The position in the other direction is determined by the homing operation.)

Operable range

For EC-RTC18
Single unit model EC-ESBR-RTC18 (single unit mass: 0.18kg, Material: steel [nickel plated])

◆Component parts (when purchased as a single unit)

- ③ Stopper block: 1 pc. (included)
- ⑤ Stop screw with hexagonal hole (M8 x 12): 1 pc. (included)

◆Component parts (when selected as an option)

- ① Table adaptor: 1 pc. (mounted for shipment)
- ② Stopper ring: 1 pc. (included)
- ③ Stopper block: 1 pc. (included)
- ④ Bolt with hexagonal hole (M5 x 15): 4 pcs. (included)
- ⑤ Stop bolt with hexagonal hole (M8 x 12): 1 pc. (included)

Non-motor end specification

Model **NM** **Applicable models** **All models**

Description The positive rotation direction will normally be clockwise when viewing the rotating part from above. Counterclockwise can optionally be set as the positive rotation direction. Contact IAI if you would like to change the rotation direction after shipment.

Options

PNP specification * Cannot be selected together with the ACR option (NPN specification).

Model **PN** **Applicable models** All models

Description The EC series offers NPN specification input/output for connecting external devices as standard. Specifying this option changes input/output to PNP specification.

Shaft adapter

Model **SA** **Applicable models** All models

Description This adapter is used to mount jigs, etc., to rotating parts. Refer to the dimensions on the individual product page for detailed dimensions. (Mounted for shipment)

for EC-RTB4, Single unit model EC-SA-RTB4
(Single unit mass: 0.1kg, material: copper [nickel plated])
Inertia moment $0.02 \times 10^{-3} \text{kg} \cdot \text{m}^2$

for EC-RTC9, Single unit model EC-SA-RTC9
(Single unit mass: 0.06kg, material: steel [nickel plated])
Inertia moment $0.006 \times 10^{-3} \text{kg} \cdot \text{m}^2$

◆Component parts (when purchased as a single unit)
Shaft adaptor: 1 pc.

for EC-RTC12, Single unit model EC-SA-RTC12
(Single unit mass: 0.16kg, material: copper [nickel plated])
Inertia moment $0.05 \times 10^{-3} \text{kg} \cdot \text{m}^2$

for EC-RTC18, Single unit model EC-SA-RTC18
(Single unit mass: 0.39kg, material: steel [nickel plated])
Inertia moment $0.19 \times 10^{-3} \text{kg} \cdot \text{m}^2$

Table adapter

Model **TA** **Applicable models** All models

Description This adapter is used to mount jigs, etc., to rotating parts. Refer to the dimensions on the individual product page for detailed dimensions. (Mounted for shipment)

for EC-RTB4, Single unit model EC-TA-RTB4
(Single unit mass: 0.09kg, material: Aluminum [white anodized])
Inertia moment $0.04 \times 10^{-3} \text{kg} \cdot \text{m}^2$

for EC-RTC9, Single unit model EC-TA-RTC9
(Single unit mass: 0.08kg, material: Aluminum [white anodized])
Inertia moment $0.04 \times 10^{-3} \text{kg} \cdot \text{m}^2$

◆Component parts (when purchased as a single unit)
Table adaptor: 1 pc.

for EC-RTC12, Single unit model EC-TA-RTC12
(Single unit mass: 0.13kg, material: Aluminum [white anodized])
Inertia moment $0.11 \times 10^{-3} \text{kg} \cdot \text{m}^2$

for EC-RTC18, Single unit model EC-TA-RTC18
(Single unit mass: 0.32kg, material: Aluminum [white anodized])
Inertia moment $0.34 \times 10^{-3} \text{kg} \cdot \text{m}^2$

Split motor and controller power supply specification * Cannot be selected together with the ACR option (because RCON-EC connection specification is split power and controller power).

Model **TMD2** **Applicable models** All models

Description This option provides an input for actuator motion stop. Use this option to cut off only the actuator power source. Please refer to P.33 for more information on wiring.

Battery-less Absolute Encoder specification

Model **WA** **Applicable models** All models

Description The EC series offers incremental encoder specification as standard. Specifying this option installs a built-in battery-less absolute encoder.

Wireless communication specification

Model **WL** **Applicable models** All models

Description This option supports wireless communication. Specifying this option enables wireless connection with the TB-03 teaching pendant or wireless teaching controller. The start point, end point and AVD can be adjusted by wireless communication.

Wireless axis operation specification

Model **WL2** **Applicable models** All models

Description Specifying WL2 allows for the product to operate wirelessly as with WL (start point, end point, and AVD adjustment), and to also perform axis travel operation tests (forward end/backward end movement, jog, and inching). However, this function is not meant to perform automatic operation. Refer to P. 2-700 of the General Catalog 2023 for precautions on axis operations using a wireless connection. (Note) WL cannot be changed to WL2, or WL2 to WL, by the customer. Please contact IAI for this.

About push motion

The push motion function is for pushing and stopping.

[Adjusting the push force]

- * The push force during push motion can be adjusted by changing the push force (%) of the ELECYLINDER.
- * Confirm the push force in the “Correlation diagram between the push force and current limit” on each product page and select the optimal model that suits the required conditions.

(Example)

<Correlation diagram between push force and current limit>

Precaution

- * The correlation diagram between push force and current limit shows a guideline for the push force at each current limit.
- * Even if the current limit value is the same, the push force may become larger due to individual motor differences and variations in mechanical efficiency. Especially, when the current limit value is less than 30% (42% for EC-RTB4 only), the push force in the correlation diagram could increase by more than 40%.

Duty ratio

The duty ratio is the operation rate in % of the time the actuator is operating in one cycle.

The ELECYLINDER rotary type can operate at 100% duty ratio.

$$D = \frac{T_M}{T_M + T_R} \times 100 (\%)$$

D : Duty ratio

T_M: Motion time (including push motion)

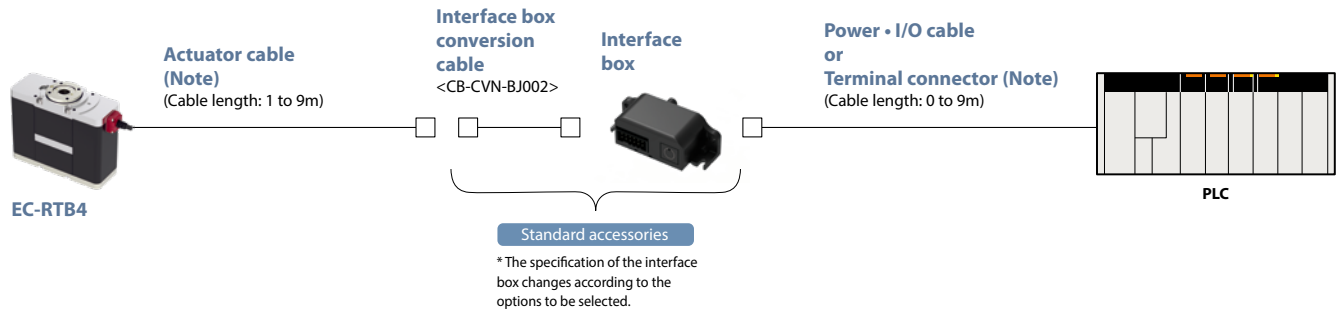

T_R: Stop time

Precautions on model selection

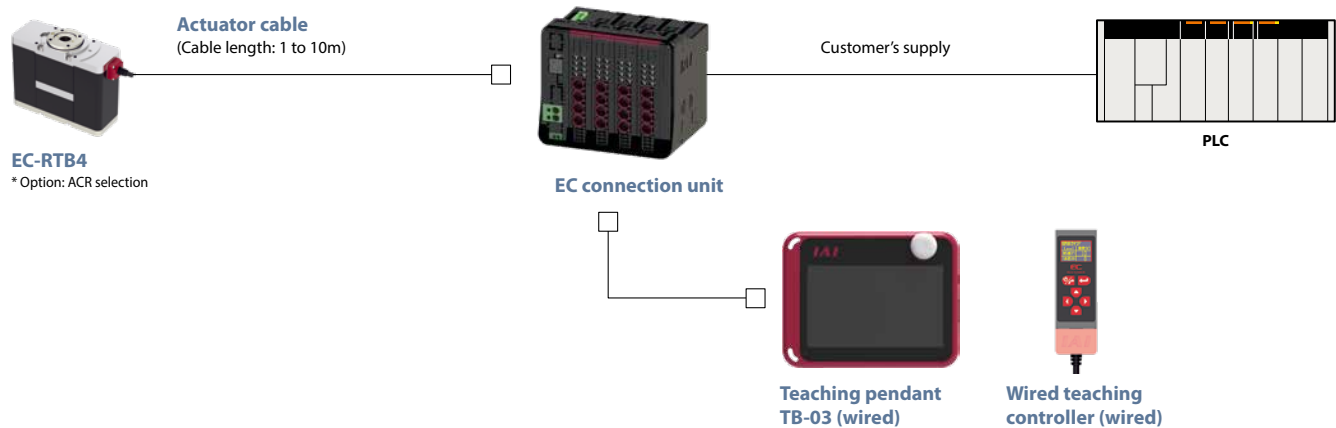

There are three connection methods for connecting EC-RTB4 and PLC. Choose one of these three connection methods. Be aware of connection limit and parts to be ordered separately. * When changing the connection method, contact IAI.

1. When connecting PLC directly (NPN/PNP specification)

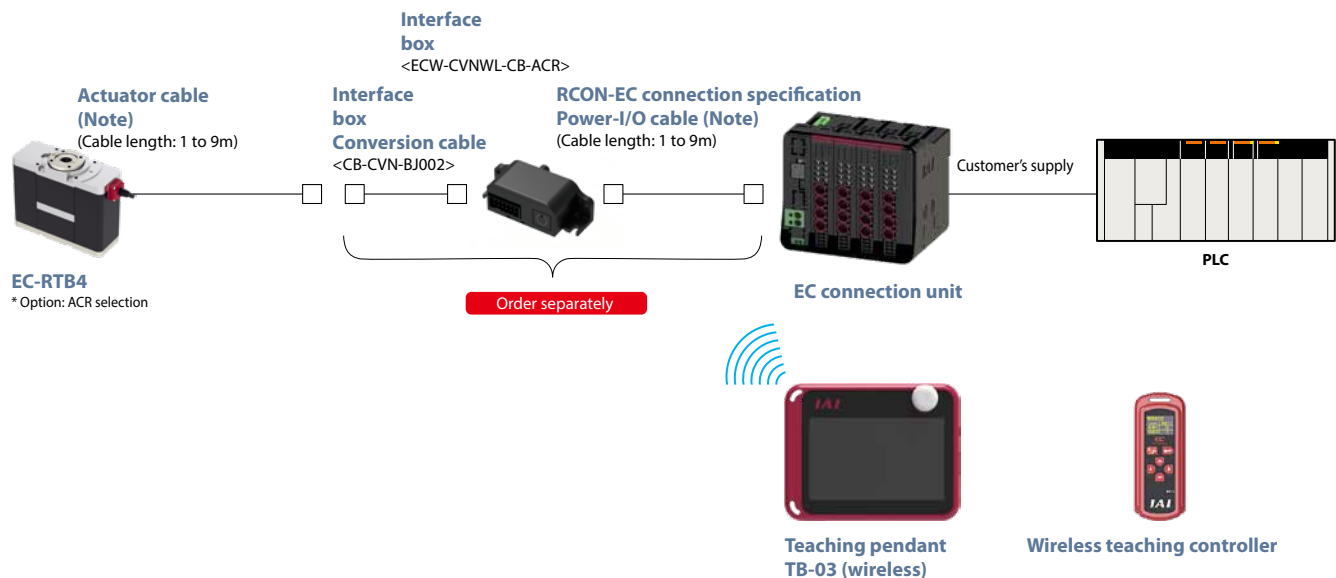

(Note) Select the cable so that the total length of the actuator cable and power · I/O cable (customer's cable in case of the terminal connector) is 10m or less.

2. When connecting a PLC via the EC connection unit (RCON-EC connection specification) [Wired connection of the teaching pendant]

3. When connecting a PLC via EC connection unit (RCON-EC connection specification) [Teaching pendant wireless connection]

The following configuration shows wireless communication specification (WL). For wireless axis operation specification (WL2), contact IAI.

(Note) Select the cable so that the total length of the actuator cable and power · I/O cable of the RCON-EC connection specification is 10m or less.

		Input voltage	24VDC ±10%
		Input current	5mA per circuit
		Leakage current	Max. 1mA/1 point
		Isolation method	Non-isolated
	Output specification	No. of outputs	3 points (forward complete, backward complete, alarm)
		Output voltage	24VDC ±10%
		Output current	50mA/1 point
		Residual voltage	2V or less
		Isolation method	Non-isolated
Data setting, input method		PC teaching software, touch panel teaching pendant, digital speed controller	
Data retention memory		Position and parameters are saved in non-volatile memory (no limit to number of rewrites)	
LED display (Note 3)	Controller status display	Servo ON (green light ON) / Alarm (red light ON) / Initializing when power comes ON (orange light ON) / Minor failure alarm (green/red alternately blinking) / Operation from teaching: Stop from teaching (red light ON) / Servo OFF (light OFF)	
	Wireless status display	Initializing wireless hardware, without wireless connection, or connecting from TP board (light OFF) / Connecting through wireless (green blinking) / Wireless hardware error (red blinking) / Initializing when power comes ON (orange light ON)	
Predictive maintenance/preventative maintenance (Note 3)		When the number of movements or operation distance has exceeded the set value and when the LED (right side) blinks alternately green and red at overload warning *Only when configured in advance	
Ambient operating temperature		0 ~ 40°C	
Ambient operating humidity		5%RH - 85%RH or less (no condensation or freezing)	
Operating environment		No corrosive gas or excessive dust	
Insulation resistance		500VDC 10MΩ	
Electric shock protection mechanism		Class 1 basic insulation	
Cooling method		Natural air cooling	

(Note 1) When connecting RCON-EC, the value will be subtracted by 0.3A of control current.

(Note 2) The rush current flows for 5ms after power is turned on. (At 40°C) Rush current value varies depending on the impedance of the power line.

(Note 3) EC-RTB4 has no LED indicator on the main unit. It can be checked on the interface box or EC connection unit.

Solenoid valve system

Normally ELECYLINDER is of the double solenoid system.

When using the single solenoid system, change the parameter to No.9 "Solenoid system selection."

(Note) When connecting RCON-EC, the single solenoid system cannot be operated.

Table of connectability for ELECYLINDER and teaching tools

ELECYLINDER single unit

○: Connection/Operation possible

Teaching tool			Connection/Operation possibility	Priority order (When connected simultaneously)
Wired connection	TB-02/03		○	1
	Wired teaching controller (TBD-1)		○	1
Wireless connection	TB-03		○ *1 *2	2
	Wireless teaching controller (TBD-1WL)		○ *1 *2	2

*1 Connectable only when ELECYLINDER is of the wireless connection specification (WL or WL2 is suffixed to the option code).

*2 Trial operations are not possible when connected with WL specification, but possible when connected with WL2 specification.

When ELECYLINDER is connected to REC/RCON/RSEL (RCON-EC-4 connection).

○ : Connection/Operation possible, △ : Connection/Operation partially impossible, X: Connection/operation not possible

Teaching tool			Connection patters	Auto (during automatic operation)		Manual	
				Connection/Operation possibility	Priority order (when simultaneous connection)	Connection/Operation possibility	Priority order (when simultaneous connection)
Wired connection	TB-02/03		(A)	X	/	X	/
			(B)	△ *3	1	○	1
	Wired teaching controller (TBD-1)		(A)	X	/	X	/
			(B)	X	/	X	/
Wireless connection	TB-03		(C)	△ *1 *3	2	○ *1 *2	2
	Wireless teaching controller (TBD-1WL)		(C)	△ *1 *4	2	○ *1 *2	2

*1 Connectable only when ELECYLINDER is of the wireless connection specification (WL or WL2 is suffixed to the option code).

*2 Trial operations are not possible when connected with WL specification, but possible when connected with WL2 specification.

*3 Only monitoring is possible (operations are not possible).

*4 Setting of speed and acceleration/deceleration and operation are possible. Position edits and trial operations are not possible.

I/O (Input/Output) Specifications

I/O		Input	Output	
Specifications	Input voltage	24VDC ±10%	Load voltage	24VDC ±10%
	Input current	5mA per circuit	Maximum load current	50mA/1 point
	ON/OFF voltage	ON voltage: Min. 18VDC OFF voltage: Max. 6VDC	Residual voltage	2V or less
	Leakage current	Max. 1mA/1 point	Leakage current	Max. 0.1mA/1 point
Isolation method		Non-isolated from external circuit		
I/O logic	NPN			
	PNP			

(Note) Isolation method is non-isolated. When grounding an external device (such as a PLC) connected to ELECYLINDER, use the same ground as ELECYLINDER.

I/O Signal Wiring Diagram

I/O	Standard specification	Split motor and controller power supply specification (option model: TMD2)
Power • I/O connector	<p>0V A1 (Reserved) A2 Backward complete A3 Forward complete A4 Alarm output A5 (Reserved) A6</p> <p>B1 24V B2 Brake release B3 Backward command (Note 1) B4 Forward command (Note 1) B5 Alarm clear B6 (reserved)</p>	<p>Drive power and control power are separate for the TMD2 specification.</p> <p>0V A1 24V (control) A2 Backward complete A3 Forward complete A4 Alarm output A5 (Reserved) A6</p> <p>B1 24V (drive) B2 Brake release B3 Backward command (Note 1) B4 Forward command (Note 1) B5 Alarm clear B6 (reserved)</p>
I/O logic	NPN	
	PNP	

I/O Signal Table

Power • I/O connector pin assignment			
Pin No.	Connector nameplate name	Signal abbreviation	Function overview
B3 (Note 1)	Backward	ST0	Backward command
B4 (Note 1)	Forward	ST1	Forward command
B5	Alarm clear	RES	Alarm clear
A3	Backward complete	LS0/PE0	Backward complete/push complete
A4	Forward complete	LS1/PE1	Forward complete/push complete
A5	Alarm	*ALM	Alarm detection (b-contact)
B2	Brake release	BKRLS	Brake forced release (for brake equipped specification)
B1 (Note 2)	24V	24V	24V input
A1	0V	0V	0V input
A2 (Note 2)	(24V)	(24V)	24V input

(Note 1) When the single solenoid system is used, B3 will be "Forward/Backward commands" and B4 is not used.

However, power • I/O connector indications will be unchanged, i.e. B3: Backward and B4: Forward.

(Note 2) For the twin power supply specification (TMD2), B1 is 24V (drive) and A2 is 24V (control).

Limit on connectable axes

* The number of all the connected axes should be 16 or less.

* When connecting EC-RTC18 to one of EC connection units (RCON-EC-4), the number of maximum connectable axes is 2.

RTC18 Number of connections	RCON-EC-4 (1 unit)	ELECYLINDERS other than the model listed on the left
1 axis	○	3 axes
2 axes	○	Cannot be connected

○ : compatible

Wireless/wired touch panel teaching pendant

- Features** This teaching device supports wireless connections. Start point/end point/AVD input and axis operations can be performed wirelessly.

- Model** **TB-03-** Please contact IAI for the current supported versions.

- Configuration** Wireless or wired connection

Specifications

Rated voltage	24VDC±10%
Power input voltage range	3.6W or less (150mA or less)
Operating ambient temperature	0 - 40°C(non-condensing, no frost)
Operating ambient humidity	5 - 85%RH (non-condensing, no frost)
Degree of protection	IPX0
Mass	Approx. 485g (body) + approx. 175g (battery)
Recharging method	Wired connection with dedicated adapter/controller
Wireless connection	Bluetooth4.2 class2

Wireless teaching controller

- Features** Start point/end point/AVD input and jog motions can be performed remotely. (Only for the ELECYLINDER with wireless option)

- Model** **TBD-1WL-**

- Configuration** Wireless connection

Specifications

Power input voltage range	5.9VDC (5.7 - 6.3V) [Supplied from the dedicated ACadapter]
Operating ambient temperature	0 - 40°C(non-condensing, no frost)
Operating ambient humidity	5 - 85%RH (non-condensing, no frost)
Degree of protection	IPX0
Mass	Approx. 115g (including 55g battery)
Recharging method	Dedicated adapter
Wireless connection	Bluetooth4.2 class2

Wired teaching controller

- Features** Start point/end point/AVD input and jog motions can be performed easily. Can be used for all ELECYLINDER models.

- Model** **TBD-1**

- Configuration** Wired connection

Specifications

Rated voltage	24VDC±10% [supplied from the controller]
Power input voltage range	1.44W or less (60mA or less)
Operating ambient temperature	0 - 40°C(non-condensing, no frost)
Operating ambient humidity	5 - 85%RH (non-condensing, no frost)
Degree of protection	IP20
Mass	Approx. 21g (main unit) + 184g (5m main unit integrated cable)

Teaching software for PC (Windows only)

Features The start-up support software which comes equipped with functions such as position teaching, trial operation, and monitoring. A complete range of functions needed for making adjustments contributes to shortened start-up time.

Model **IA-OS** (software only, for customers who already own a dedicated connection cable)

Configuration Please contact IAI for the current supported versions.

* Please purchase through your distributor and a download link will be sent to your valid email address.

Model **IA-OS-C** (with an external device communication cable + USB conversion adapter + USB cable)

Configuration Please contact IAI for the current supported versions.

* Please purchase through your distributor and a download link will be sent to your valid email address.

24V power supply

Model **PSA-24** (without fan)

Model **PSA-24L** (with fan)

External dimensions

Specifications

Item	Model	
	for 100VAC input	for 200VAC input
Input voltage range	100VAC~230VAC±10%	
Input power current	3.9A or less	1.9A or less
Power capacity	Without fan: 250VA With fan: 390VA	Without fan: 280VA With fan: 380VA
Rush current *1	With fan: 17A (typ) Without fan: 27A (typ)	Without fan: 34A (typ) With fan: 548A (typ)
Heat quantity	33W (at 204W continuous rated) 33W (at 300W continuous rated)	33W (at 204W continuous rated) 33W (at 330W continuous rated)
Output voltage range *2	24V±10%	
Continuous rated output	Without fan: 8.5A (204W) With fan: 13.8A (330W)	
Peak output	17A(408W)	
Efficiency	86% or higher	90% or higher
Parallel connection *3	Up to 5 units	

*1 The pulse width of rush current flow is 5ms or less.

*2 This power source can change output voltage according to the load to enable parallel operations. Therefore, this power unit is only for IAI controllers.

*3 Parallel connections under the following conditions are not possible.

- Parallel connection of PSA-24 (without fan) and PSA-24L (with fan).
- Parallel connection with power units other than this unit.
- Parallel connection with PS-24.

Power capacity calculation "Calculator" software

The Calculator comes with the IA-OS software.

RCON-EC connection specification Interface box for split power and controller power specification (wireless communication supported)

Model **ECW-CVNWL-CB-ACR**

Interface box conversion cable

Features This cable is for connecting actuator cable and interface box.

Model **CB-CVN-BJ002**

Maintenance Parts (Cable)

When placing an order for a replacement cable after purchasing a product, please use the model name shown below.

■ Table of compatible cables

Cable type	Cable model	Applicable models
Power • I/O cable (user-wired specification)	CB-EC-PWBIO□□□-RB	All models
Power • I/O cable (user-wired specification, four-way connector)	CB-EC2-PWBIO□□□-RB	Stepper motor only
Power • I/O cable (RCON-EC connection specification)	CB-REC-PWBIO□□□-RB	All models
Power • I/O cable (RCON-EC connection specification, four-way connector)	CB-REC2-PWBIO□□□-RB	Stepper motor only

Model CB-EC-PWBIO□□□-RB

*Please indicate the cable length (L) in □□□, Up to 10m(for example. 030 = 3m)

1-1871940-6

Color	Signal name	Pin No.
Black (AWG18)	0V	A1
Red (AWG18)	24V	B1
Light blue (AWG26)	(Reserved) (Note 1)	A2
Orange (AWG26)	IN0	B3
Yellow (AWG26)	IN1	B4
Green (AWG26)	IN2	B5
Pink (AWG26)	(Reserved)	B6
Blue (AWG26)	OUT0	A3
Purple (AWG26)	OUT1	A4
Gray (AWG26)	OUT2	A5
White (AWG26)	(Reserved)	A6
Brown (AWG26)	BKRLS	B2

(Note 1) 24V (control) when split motor and controller power supply specification (TMD2) are selected.
(Note 2) Yellowish green and light gray wires are not used. (after cutting inside the shrinkable ube)

Model CB-EC2-PWBIO□□□-RB

*Please indicate the cable length (L) in □□□, Up to 10m(for example. 030 = 3m)

1-1871940-6

Color	Signal name	Pin No.
Black (AWG18)	0V	A1
Red (AWG18)	24V	B1
Light blue (AWG26)	(Reserved) (Note 1)	A2
Orange (AWG26)	INO	B3
Yellow (AWG26)	IN1	B4
Green (AWG26)	IN2	B5
Pink (AWG26)	(Reserved)	B6
Blue (AWG26)	OUT0	A3
Purple (AWG26)	OUT1	A4
Gray (AWG26)	OUT2	A5
White (AWG26)	(Reserved)	A6
Brown (AWG26)	BKRLS	B2

(Note 1) 24V (control) when split motor and controller power supply specification (TMD2) are selected.
(Note 2) Yellowish green and light gray wires are not used. (after curing inside the shrinkable ube)

Model CB-REC-PWBIO□□□-RB

*Please indicate the cable length (L) in □□□, Up to 10m(for example. 030 = 3m)

1-1871940-6

Color	Signal name	Pin No.
Black (AWG18)	0V	A1
Red (AWG18)	24V(MP)	B1
Light blue (AWG26)	24V(CP)	A2
Orange (AWG26)	INO	B3
Yellow (AWG26)	IN1	B4

5	IN2	Gray (AWG26)
11	BKRLS	Brown (AWG26)
13	FG	Green (AWG26)

Maintenance Parts (Cable)

4-way connector cable

This cable allows the connector direction of ELECYLINDER to be changed any of 4 directions.

The cable wiring for the connector is the same as that of power • I/O cable CB-EC-PWBIO□□□-RB / CB-REC-PWBIO□□□-RB.

Specify cable length in □□□.
(Ex.) 050=5m

	Standard connector (mechanical side)	4-way connector (mechanical side)
External appearance		
User wiring specification	CB-EC-PWBIO□□□-RB	CB-EC2-PWBIO□□□-RB
RCON-EC connection specification	CB-REC-PWBIO□□□-RB	CB-REC2-PWBIO□□□-RB

Ordering method

Cable length is minimum 1m and maximum 10m.
Lengths can be specified in 1m increments.

(Ex.) In case of ordering a 4-way connector 3m/10m.

Cable length 3m : CB-EC2-PWBIO030-RB

Cable length 10m : CB-EC2-PWBIO100-RB

Assembling method

Cable exit direction can freely be selected.

(1) Insert while sliding along the groove in the desired direction from the semi-cylindrical curved portion.

(2) Confirm that the cable has been firmly inserted, and then insert the 2 sides of the lid along the groove.

(3) Finally, press the remaining side of the lid.
