[Note]:HFKP series are all standard come with magnet. (not includes sensor)

### Specification

| Bore size (mm)     | 16   | 20 | 25 | 32        |
|--------------------|--|----|----|-----------|
| Acting type        | Double acting                              |    |    |           |
| Fluid              | Air(to be filtered by 40µm filter element) |    |    |           |
| Operating pressure | 22~100psi(0.15~0.7MPa)                     |    |    |           |
| Temperature°C      | -20~70                                     |    |    |           |
| Lubrication        | Not required                               |    |    |           |
| Repeatability mm   | ±0.01                                      |    |    | ±0.02     |
| Max. frequency     | 180(c.p.m)                                 |    |    | 60(c.p.m) |
| Sensor switches    | CMSH, DMSH, EMSH, CMSG, DMSG, EMSG         |    |    |           |
| Port size          | M5×0.8                                     |    |    |           |

[Note1]Refer to P535 for detail of sensor switch.

### Gripping force and stroke

| Bore size                                       |        | 16  | 20  | 25  | 32  |
|---|--------|-----|-----|-----|-----|
| Gripping force per finger<br>Effective value(N) | Closed | 30  | 42  | 65  | 158 |
|   | open   | 40  | 66  | 104 | 193 |
| Opening/Closing stroke(Both sides)(mm)          |        | 6   | 10  | 14  | 22  |
| Weight (g)                                      |        | 130 | 251 | 475 | 792 |

[Note] The gripping force in the above table is at working pressure of 0.5MPa, and with a gripping point of L=20mm.

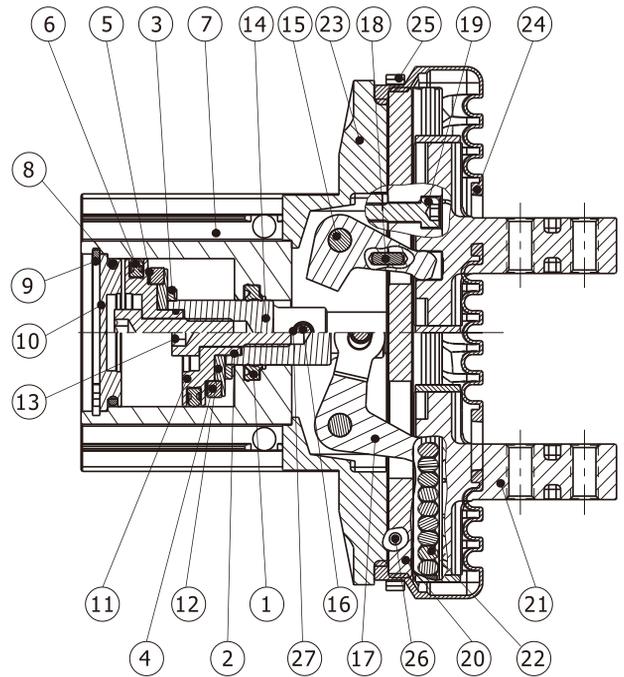

Add) Please refer to page 509 for the definition of "L".

## HFKP Series

### Inner structure and material of major parts

| NO. | Item               | NO. | Item                 |
|-----|--------------------|-----|----------------------|
| 1   | Rod packing        | 15  | Pin                  |
| 2   | O-ring             | 16  | Pin                  |
| 3   | Bumper             | 17  | Curved bar           |
| 4   | Magnet             | 18  | Pin                  |
| 5   | Magnet washer      | 19  | Countersink screw    |
| 6   | Piston seal        | 20  | Guide roller         |
| 7   | Body               | 21  | Clamping jaw         |
| 8   | O-ring             | 22  | Guide rail           |
| 9   | C clip             | 23  | Dustproof cover ring |
| 10  | Back cover         | 24  | Dustproof cover      |
| 11  | Piston             | 25  | Fixed rod            |
| 12  | Magnet fixed flake | 26  | Screw                |
| 13  | Countersink screw  | 27  | Pin bushing          |
| 14  | Piston rod         |     |                      |

[Note]: No. 25 and No. 26 in the above table are only for HFKP32.

### How to select product

Please select pneumatic finger according to the following steps:

① The selection of the effective gripping force

② the confirmation of the gripping point

③ the confirmation of the external force put on the gripping jaw

#### 1. The selection of the gripping force

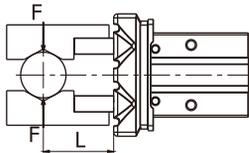

The gripping work-pieces shown below, on the impact condition of ordinary handling state, taking safety coefficient  $a=4$ , have a gripping force that is more than 10-20 times of the mass of the gripped objects.

|  |  |   |   |
|--|--|---|---|
|  | The work-pieces as shown in the left :   | $\mu = 0.2$   | $\mu = 0.1$   |
|  | F: Gripping force (N)<br>$\mu$ : friction coefficient between fittings and work-pieces.<br>m: mass of work-pieces<br>g: acceleration of gravity ( $=9.8m/s^2$ )<br><br>The condition that the work-pieces won't drop is: $2 \times \mu F > mg$<br>so: $F > \frac{mg}{2 \times \mu}$<br><br>Safety coefficient is a, so F is:<br>$F = \frac{mg}{2 \times \mu} \times a$ | $F = \frac{mg}{2 \times 0.2} \times 4 = 10 \times mg$ | $F = \frac{mg}{2 \times 0.1} \times 4 = 20 \times mg$ |
|  |  | 10 times of the mass of the gripped objects           | 20 times of the mass of the gripped objects           |

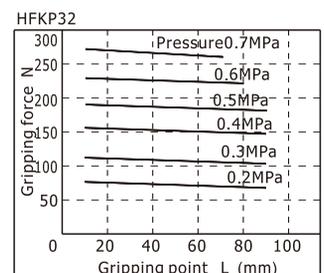

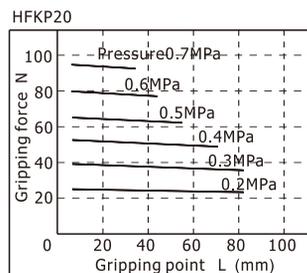

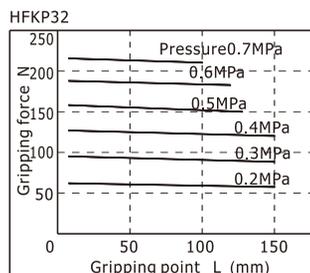

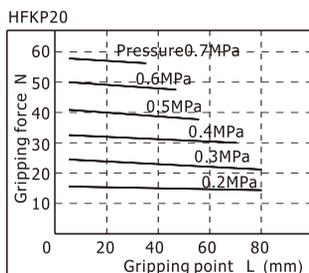

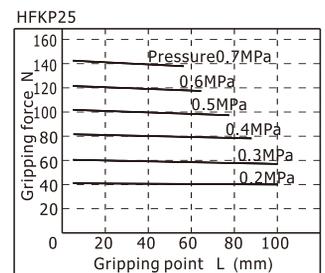

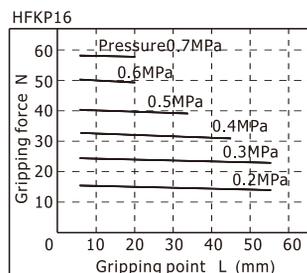

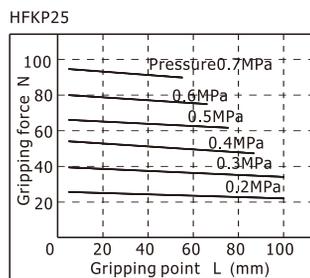

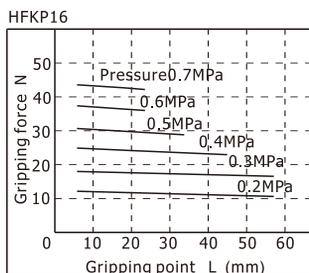

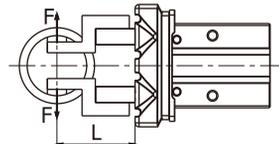

Note) If the friction coefficient  $\mu > 0.2$ , for safety, please also select clamping force according to the principle of 10~20 times of the mass of the clamped objects. As for large acceleration and shock, it requires for greater safety coefficient.

1.1) The actual gripping force must be within the effective gripping forces of different pneumatic fingers specifications shown in the below chart.

#### Closed gripping force

#### Opened gripping force

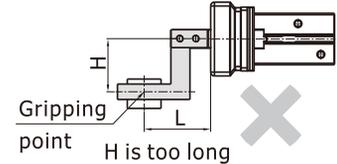

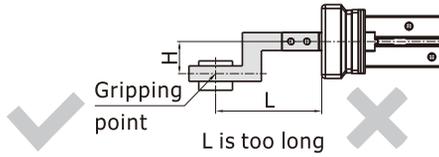

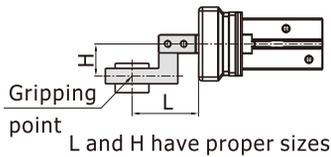

## HFKP Series

### 2. The selection of the gripping point

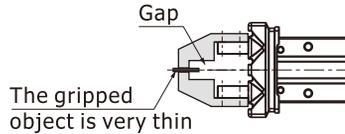

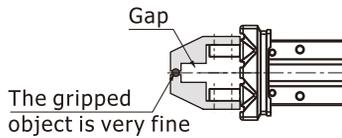

2.1) Please select the gripping point within the limited field shown below.

Over the limits, gripping jaws would be subjected to excessive torque loads, and lead to short life of the air gripper.

2.2) In the allowable range of gripping point, it is better to design for short and light fittings. If the fittings are long and heavy, the inertia force when the finger is open and close will become larger, and the performance of gripping jaw will be degraded, at the same time it will affect the life.

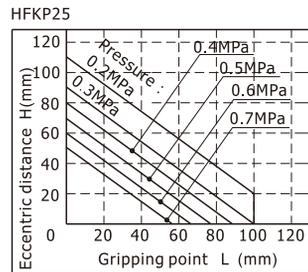

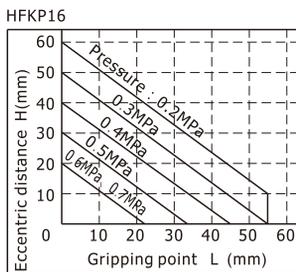

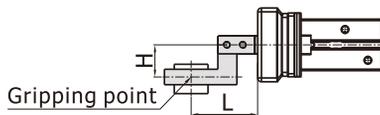

2.3) When the gripped object is very fine and thin, you have to equip with gap between fittings. If not, there will be unstable clamp, resulting in a position offset and adverse clamping and so on.

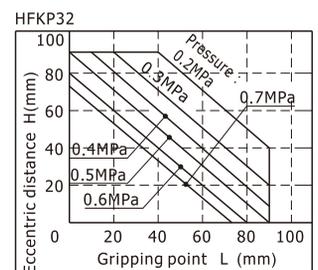

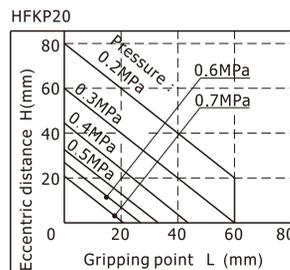

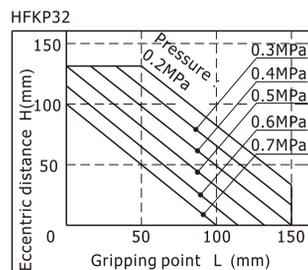

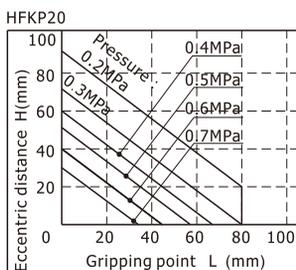

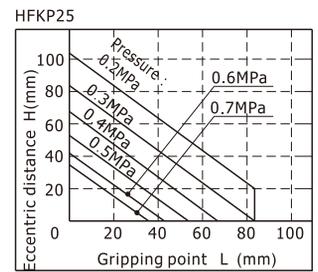

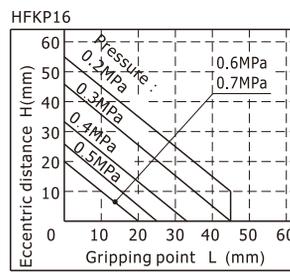

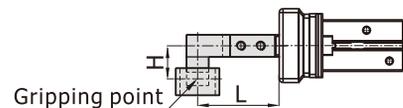

### 3. The confirmation of the external force put on the gripping jaw.

| Bore size | The allowed vertical loads Fv(N) | Max. permissible torque(Nm) |      |      | The calculation of allowable forces when moment loads work  | Examples of calculation  |
|-----------|----------------------------------|-----------------------------|------|------|---|--|
|           |                                  | Mp                          | My   | Mr   |   |  |
| 16        | 147                              | 0.68                        | 0.68 | 1.36 | $\frac{\text{Allowable load(N)} \times \text{M(Maximum permissible moment)(N.m)}}{L \times 10^{-3}}$ Unit conversion constant | In the guide rail of HFKP16, the external force of the pitching moment static loads put on the point of L=30mm is f=10 N, Allowable load F= 0.68/(30×10 <sup>-3</sup> ) = 22.7(N)<br>Actual load f=10(N)<22.7(N)<br>To meet the using requirements |
| 20        | 221                              | 1.32                        | 1.32 | 2.65 |   |  |
| 25        | 382                              | 1.94                        | 1.94 | 3.88 |   |  |
| 32        | 514                              | 3                           | 3    | 6    |   |  |

### Closed gripping points

### Opened clamping point

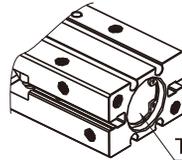

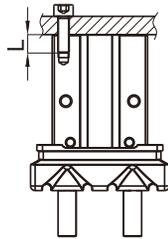

## HFKP Series

### Installation and application

1. Due to the abrupt changes, the circuit pressure is low, which will lead to the decrease of the gripping force and falling of the work-pieces. In order to avoid the harm to the human body and damage to the equipment, anti-dropping device must be equipped.
2. Don't use the air gripper under strong external force and impact force.
3. When install and fix the air gripper, avoid falling down, collision and damage.
4. When fixing the gripping jaw parts, don't twist the gripping jaw.
5. There are several kinds of installation method, and the locking torque of fastening screw must be within the prescribed torque range shown in the below chart. If the locking torque is too large, it will cause the dysfunctional. If the locking torque is too small, it will cause the position deviation and fall.

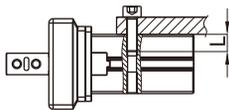

#### Tail installation type

The bore of the tail is used for mounting and positioning

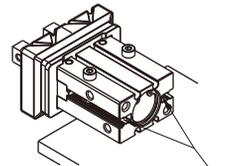

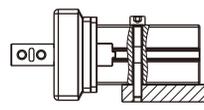

| Bore size | The bolts type | Max. locking moment | Max. screwed depth | The aperture of the positioning bore | The depth of the positioning bore |
|-----------|----------------|---------------------|--------------------|--------------------------------------|-----------------------------------|
| 16        | M4×0.7         | 2.1N.m              | 8mm                | Φ17mm <sup>+0.05</sup> <sub>0</sub>  | 1.5mm                             |
| 20        | M5×0.8         | 4.3N.m              | 10mm               | Φ21mm <sup>+0.05</sup> <sub>0</sub>  | 2mm                               |
| 25        | M6×1.0         | 7.3N.m              | 12mm               | Φ26mm <sup>+0.05</sup> <sub>0</sub>  | 2mm                               |
| 32        | M6×1.0         | 7.9N.m              | 12mm               | Φ34mm <sup>+0.05</sup> <sub>0</sub>  | 2.5mm                             |

#### The installation of the front threaded hole

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 16        | M4×0.7         | 2.1                     | 7                      |
| 20        | M5×0.8         | 4.3                     | 8                      |
| 25        | M6×1.0         | 7.3                     | 10                     |
| 32        | M6×1.0         | 7.9                     | 10                     |

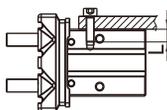

#### The installation of the front through hole

When installed from front through holes, sensors can not be installed in the sensor grooves that are interfered by screws.

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 16        | M3×0.5         | 0.88                    | 8                      |
| 20        | M4×0.7         | 2.1                     | 10                     |
| 25        | M5×0.8         | 4.3                     | 12                     |
| 32        | M5×0.8         | 4.3                     | 13                     |

#### Surface installation type

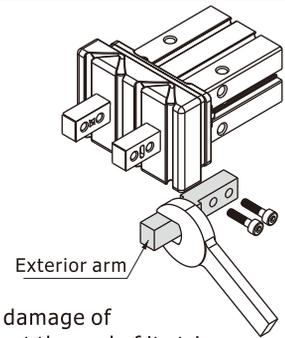

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 16        | M4×0.7         | 1.6                     | 4.5                    |
| 20        | M5×0.8         | 3.3                     | 8                      |
| 25        | M6×1.0         | 5.9                     | 10                     |
| 32        | M6×1.0         | 5.9                     | 10                     |

## HFKP Series

### Installation and application

6. The installation method of the gripping jaw fittings  
When install the gripping jaw fittings, you have to pay particular attention that you can only hold the gripping jaw by using spanner, and then lock the screws with allen wrench. Never clamp the body directly and then lock the screws, otherwise the parts will be easily damaged.

| Bore size | The bolts type | Max. locking moment(Nm) |
|-----------|----------------|-------------------------|
| 16        | M3×0.5         | 0.59                    |
| 20        | M4×0.7         | 1.4                     |
| 25        | M5×0.8         | 2.8                     |
| 32        | M6×1.0         | 4.9                     |

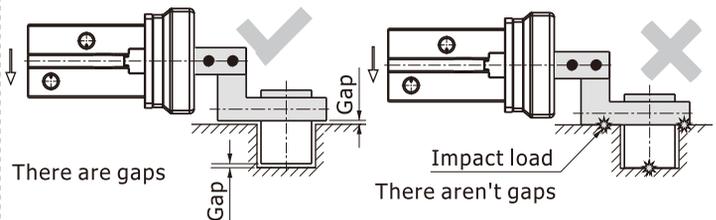

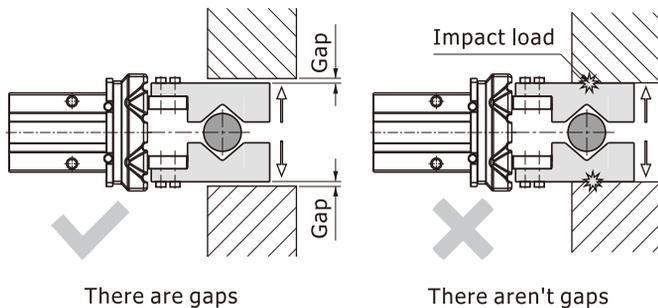

7. Confirm that there is no external forces exerted on the gripping jaw.

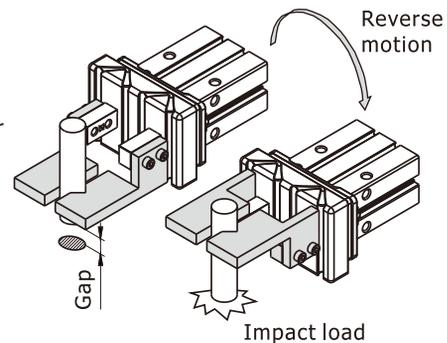

Transverse load acts on the gripping jaw, which will cause impact load and leads to the shaking and damage of gripping jaw. Equip with gaps so that the air gripper will not crash into work-pieces and accessories at the end of its trip.

7.1) The end of stroke under the open state of air gripper

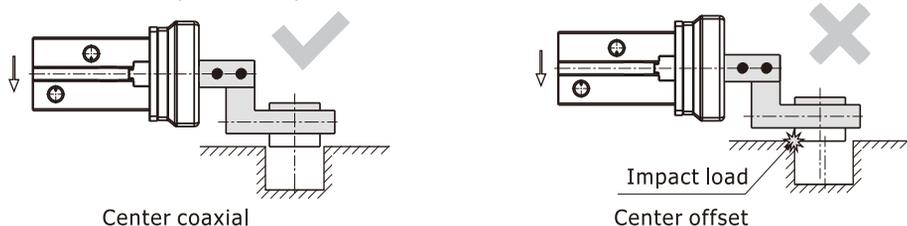

7.2) The end of stroke under the move state of air gripper

7.3) Reverse motion state When reverse motion state, the gripping point must be precision, otherwise in the reverse motion state the air gripper maybe impact with ambience and will cause impact load .

8. When the work-pieces are inserted, the center line should be coaxial, no offset, in case there are external force generated on gripping jaw. When testing, it is specially required that the manual operation should be reduced, the pressure should be used to run it at a low speed, and guarantee the safety and no impact.

9. Please use the flow control valve to adjust the opening and closing speed of gripping jaw if too fast.

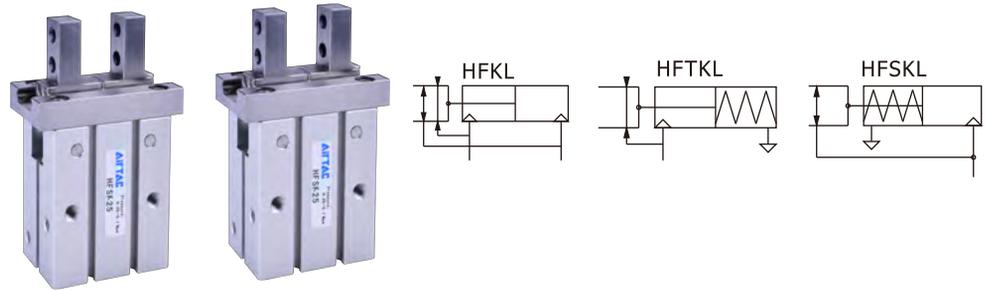

10. People can not enter the movement path of air gripper and articles can not be placed on the path too.

11. Before removing the air gripper, please confirm that it is out of working state, and then discharge of compressed air.

# Air gripper—HFKL Series

## Parallel style with guide track—Roller bearing and longer stroke

[Note] The gripping force in the above table is in the working pressure of 75psi, and with a gripping point of L=20mm.

Add) Please refer to page 493 for the definition of "L".

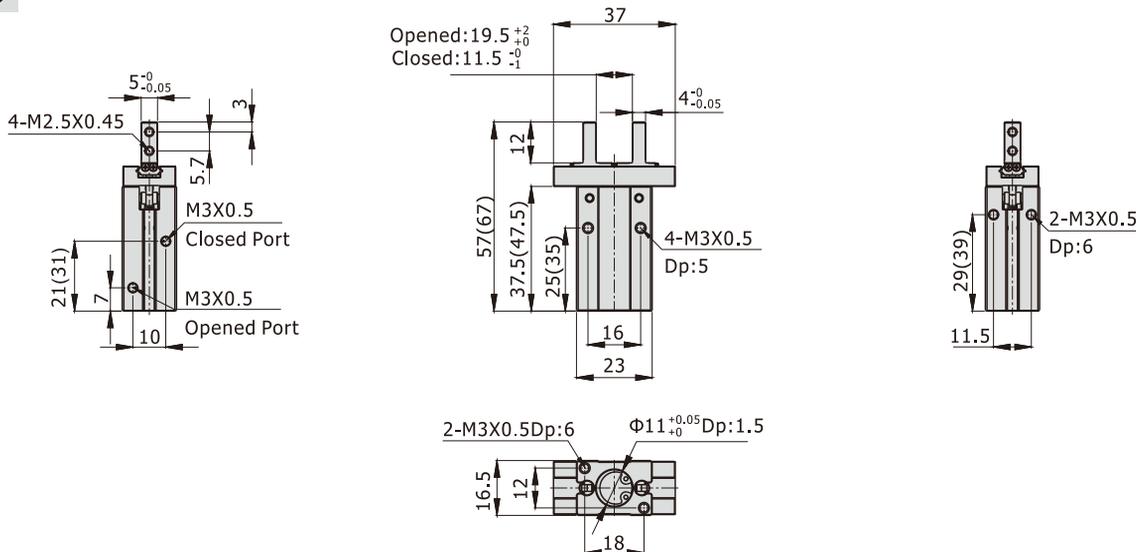

### Inner structure

Inner structure is the same as "HFK series", Please refer to page 490 for details.

### Dimensions

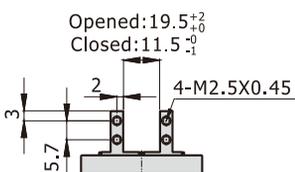

#### HFKL10

[Unit: mm]

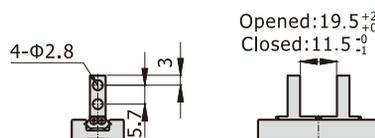

[Note]The values in "( )" in the above table are single acting type sizes.

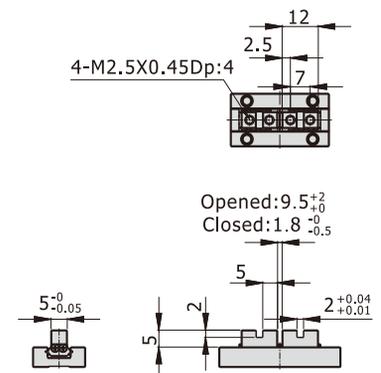

#### Side mounting type(B type)

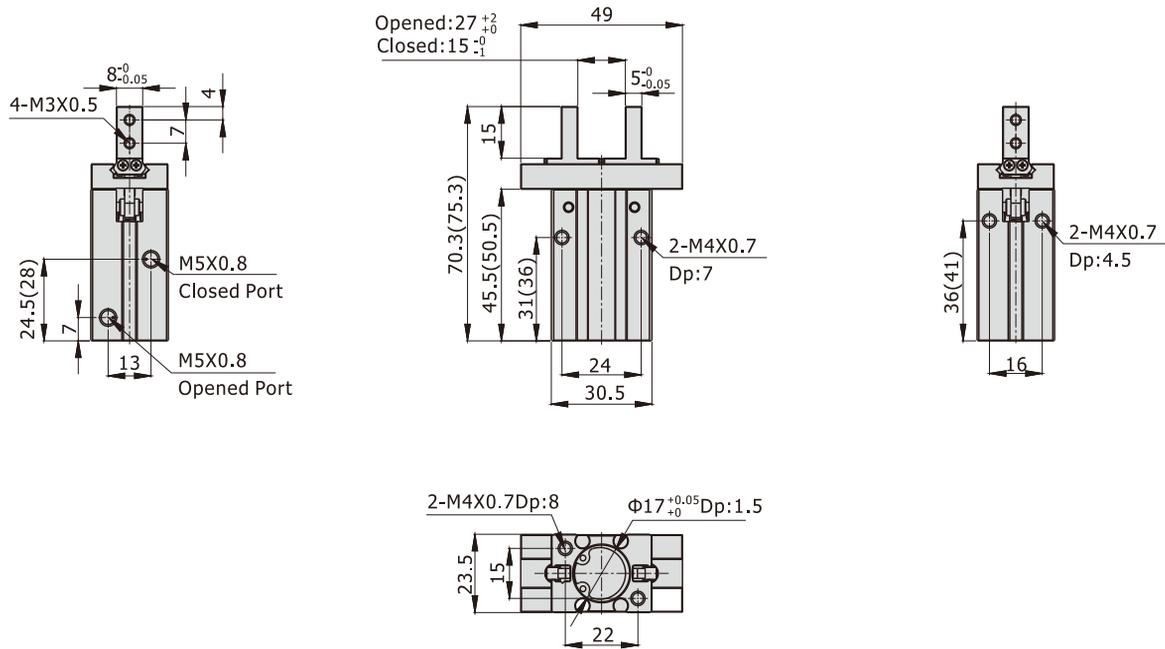

#### Thru.hole mounting type(N type)

#### Bottom mounting type(F type)

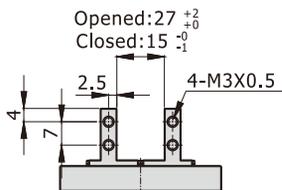

#### HFKL16

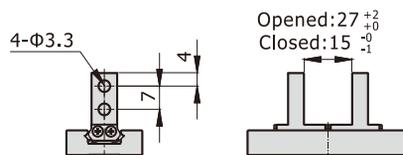

[Note]The values in "( )" in the above table are single acting type sizes.

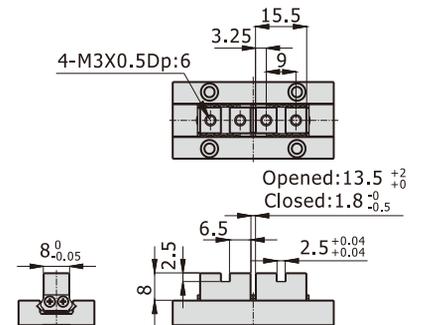

#### Side mounting type(B type)

#### Thru.hole mounting type(N type)

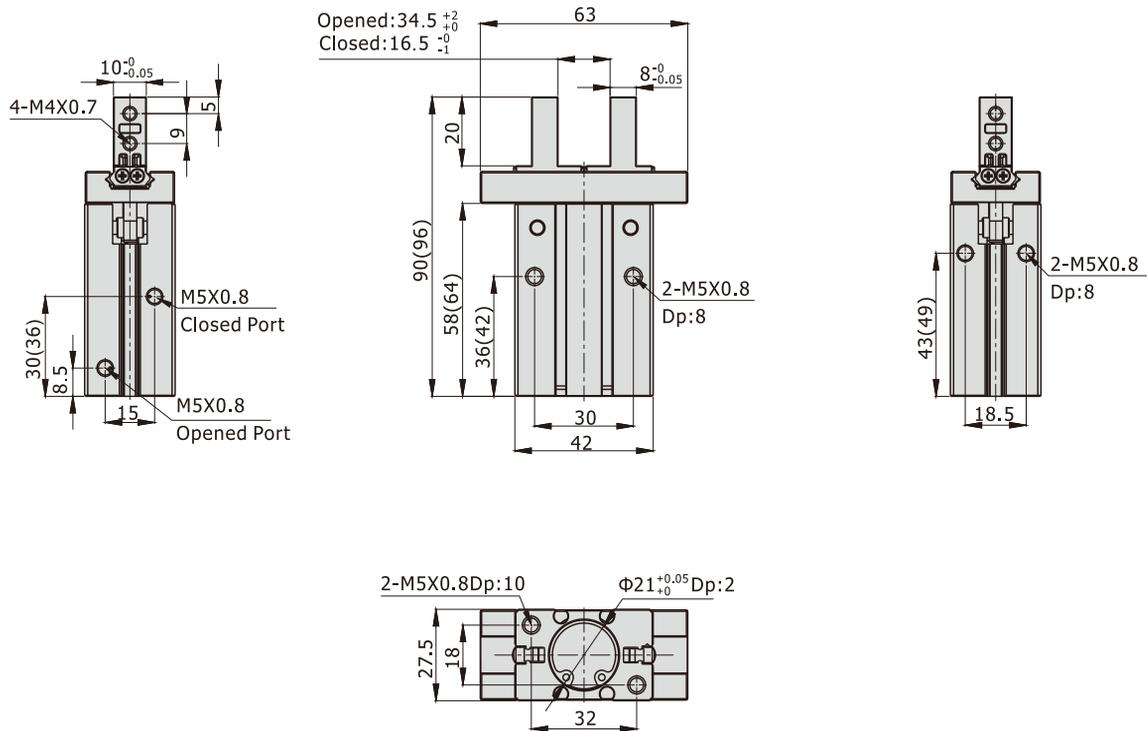

#### Bottom mounting type(F type)

## HFKL Series

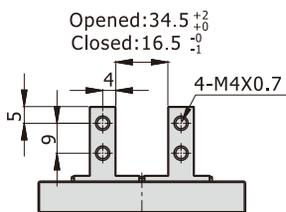

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$

### HFKL20

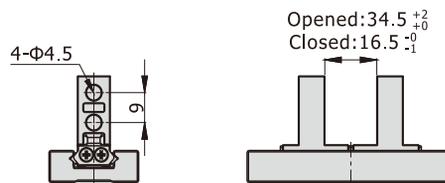

[Note]The values in "( )" in the above table are single acting type sizes.

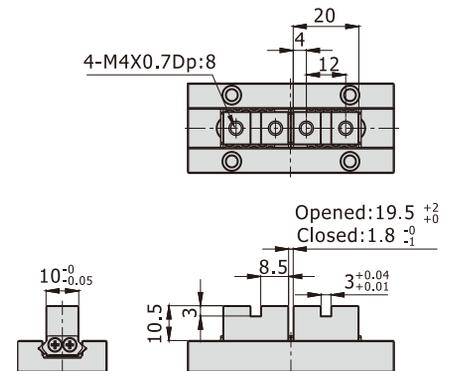

### Side mounting type(B type)

### Thru.hole mounting type(N type)

### Bottom mounting type(F type)

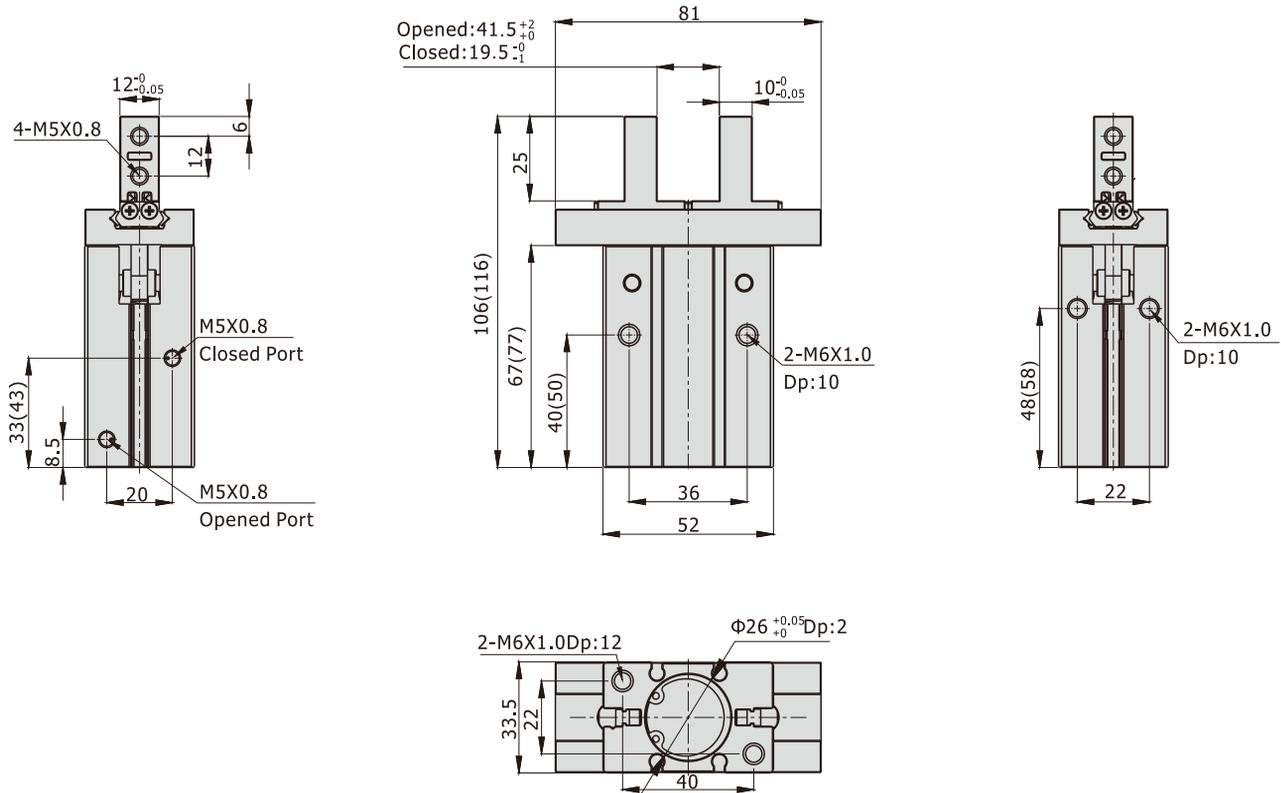

# Air gripper(parallel style——Roller bearing/Longer stroke) **AIRTAC**

## HFKL Series

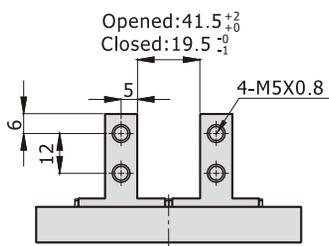

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$

### HFKL25

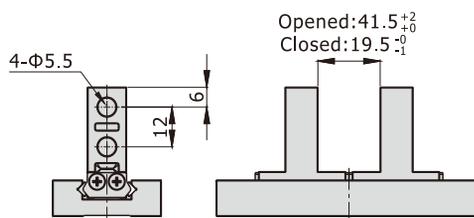

[Note]The values in "( )" in the above table are single acting type sizes.

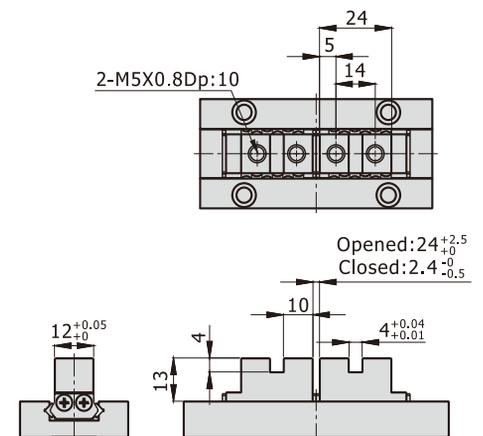

#### Side mounting type(B type)

#### Thru.hole mounting type(N type)

#### Bottom mounting type(F type)

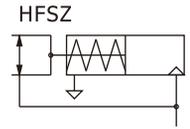

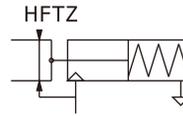

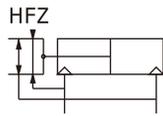

## How to select product \ Installation and application

Please refer to HFK series for details.

# Air gripper—HFZ Series

## Parallel style with guide track—Ball bearing

### Ordering code

**HFZ 20** □

①      ②      ③

#### ① Model

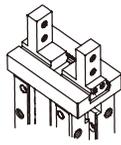

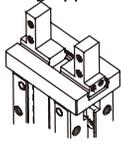

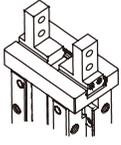

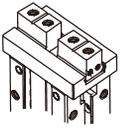

HFZ: Air finger(Double acting)  
 HFSZ: Air finger  
 (Single acting and normally closed)  
 HFTZ: Air finger  
 (Single acting and normally opened)

#### ② Bore size

6 10 16 20 25 32 40

HFZ series are all attached with magnet.  
 Sensor should be ordered individually.

#### ③ Finger type

| Bore size                    | Finger type  |   |

## How to select product \ Installation and application

Please refer to HFK series for details.

# Air gripper—HFK Series

## Parallel style with guide track—Roller bearing

### Ordering code

**HFK 20** □

①      ②      ③

#### ① Model

HFK: Air finger(Double acting)

HFSK: Air finger  
(Single acting and normally closed)

HFTK: Air finger  
(Single acting and normally opened)

#### ② Bore size

10 16 20 25 32 40

HFK series are all attached with magnet.  
Sensor should be ordered individually.

#### ③ Finger type

| Bore size                        | Finger type                           |                                 |
|----------------------------------|---------------------------------------|---------------------------------|

### How to select product

Please select pneumatic finger according to the following steps:

#### 1. The selection of the gripping force

The gripping work-pieces shown below, on the impact condition of ordinary handling state, taking safety coefficient  $a=4$ , have a gripping force that is more than 10-20 times of the mass of the gripped objects.

| The work-pieces as shown in the left :  |   | $\mu=0.2$   | $\mu=0.1$   |
|---|---|---|---|
| <p>                     F: Gripping force (N)<br/> <math>\mu</math>: friction coefficient between fittings and work-pieces.<br/>                     m: mass of work-pieces<br/>                     g: acceleration of gravity (<math>=9.8m/s^2</math>)                 </p> | The condition that the work-pieces won't drop is: $2 \times \mu F > mg$<br>so: $F > \frac{mg}{2 \times \mu}$<br>Safety coefficient is a, so F is:<br>$F = \frac{mg}{2 \times \mu} \times a$ | $F = \frac{mg}{2 \times 0.2} \times 4 = 10 \times mg$ | $F = \frac{mg}{2 \times 0.1} \times 4 = 20 \times mg$ |
|   |   | 10 times of the mass of the gripped objects           | 20 times of the mass of the gripped objects           |

Note) If the friction coefficient  $\mu > 0.2$ , for safety, please also select clamping force according to the principle of 10~20 times of the mass of the clamped objects. As for large acceleration and shock, it requires for greater safety coefficient.

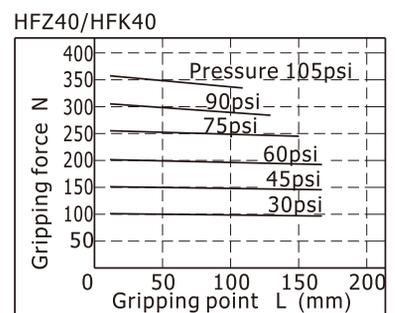

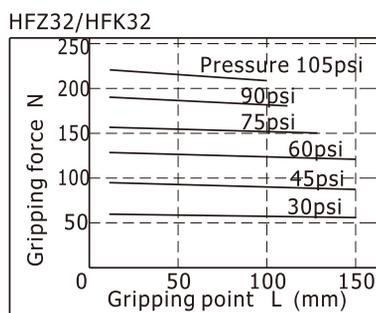

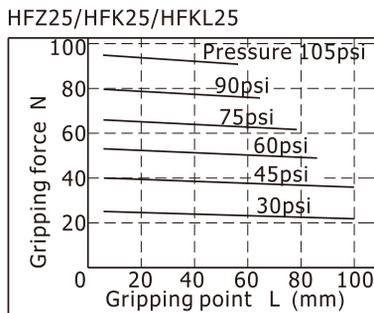

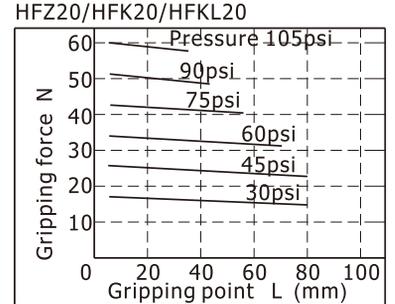

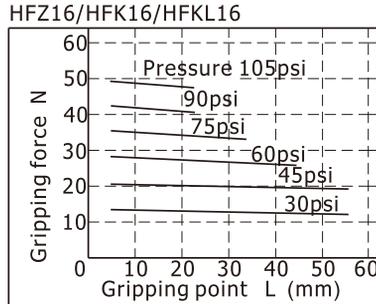

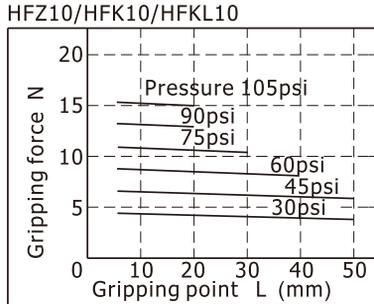

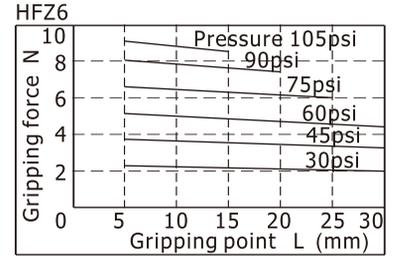

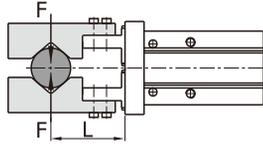

1.1) The actual gripping force must be within the effective gripping forces of different pneumatic fingers specifications shown in the below chart.

# Air gripper(parallel style)

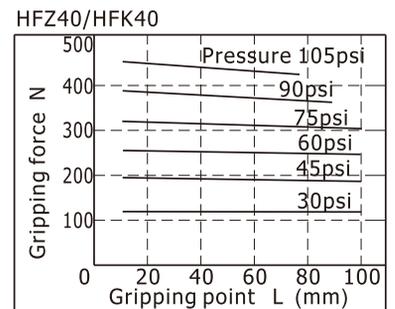

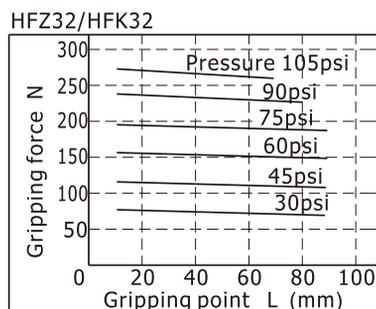

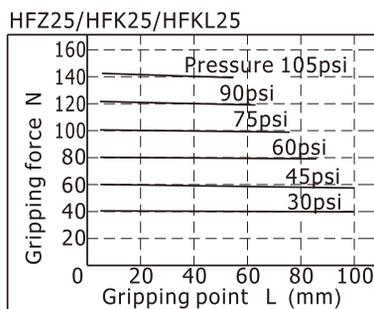

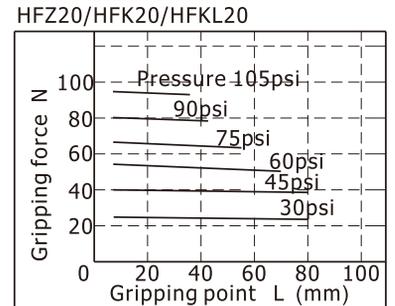

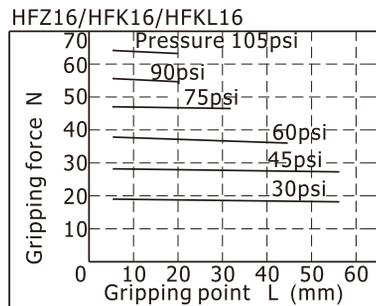

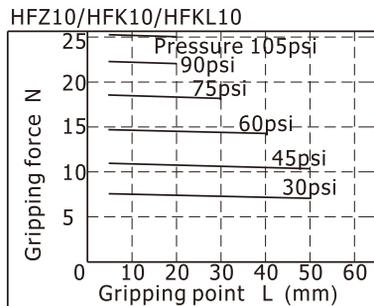

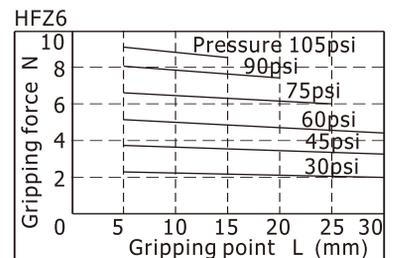

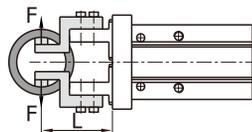

## HFZ,HFK,HFKL Series

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$ ,  $\Phi 32$ ,  $\Phi 40$

### Double acting type closed gripping force

### Double acting type opened gripping force

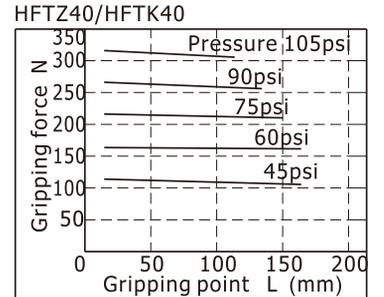

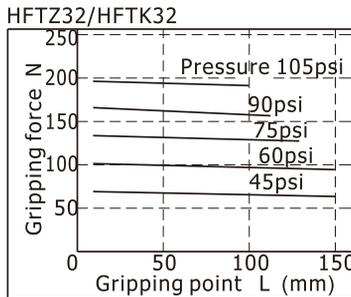

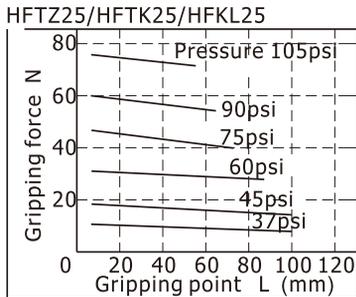

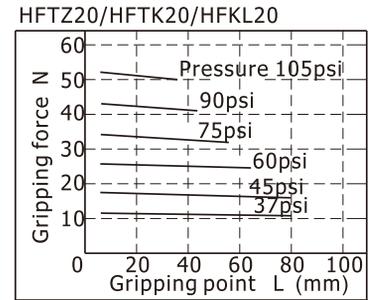

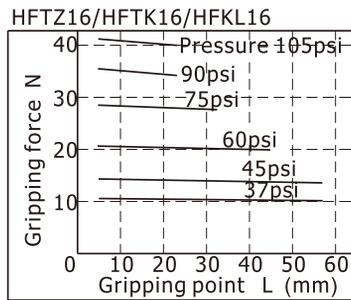

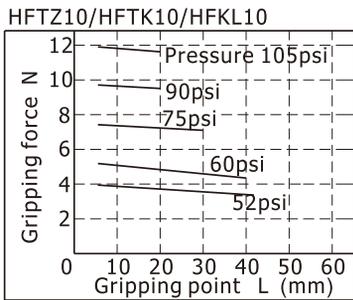

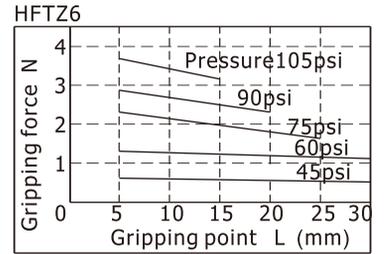

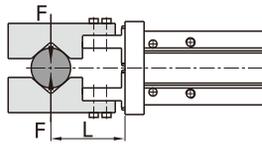

# Air gripper(parallel style)

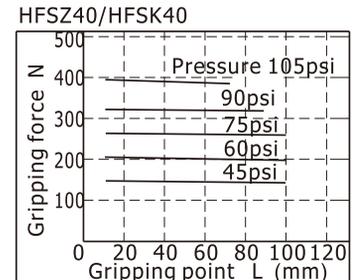

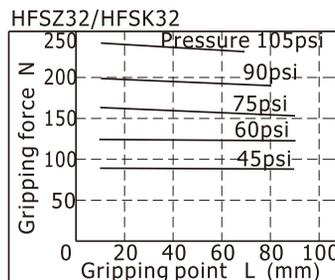

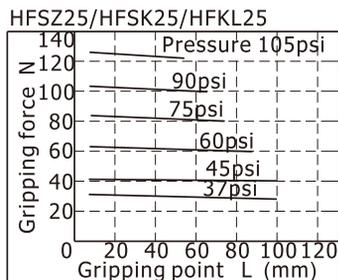

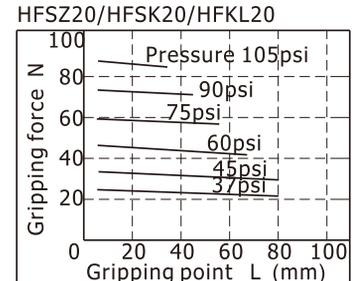

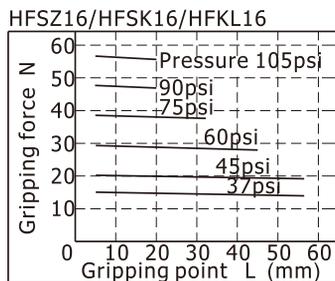

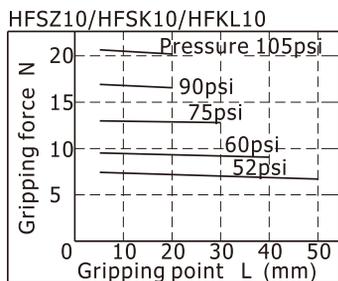

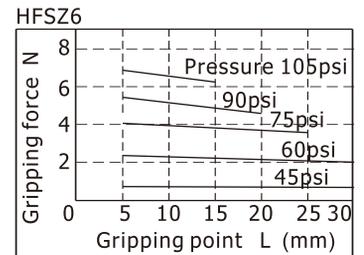

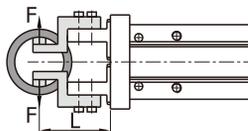

## HFZ,HFK,HFKL Series

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$ ,  $\Phi 32$ ,  $\Phi 40$

### Single acting normally opened gripping force

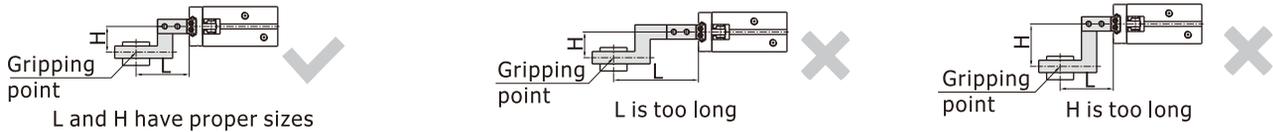

### Single acting normally closed clamping force

### 2. The selection of the gripping point

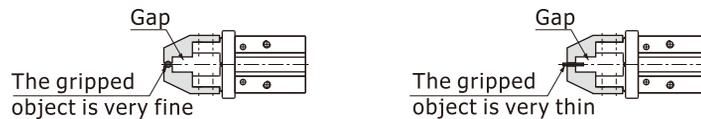

2.1) Please select the gripping point within the limited field shown below.

Over the limits, gripping jaws would be subjected to excessive torque loads, and lead to short life of the air gripper.

2.2) In the allowable range of gripping point, it is better to design for short and light fittings. If the fittings are long and heavy, the inertia force when the finger is open and close will become larger, and the performance of gripping jaw will be degraded, at the same time it will affect the life.

2.3) When the gripped object is very fine and thin, you have to equip with gap between fittings. If not, there will be unstable clamp, resulting in a position offset and adverse clamping and so on.

### 3. The confirmation of the external force put on the gripping jaw.

| Bore size | The allowed vertical loads Fv(N) |     |      | Max. permissible torque(Nm) |      |      | The calculation of allowable forces when moment loads work  | Examples of calculation  |
|-----------|----------------------------------|-----|------|-----------------------------|------|------|---|--|
|           | HFK                              | HFZ | HFKL | Mp                          | My   | Mr   |   |  |
| 6         | -                                | 10  | -    | 0.04                        | 0.04 | 0.08 | $\text{Allowable load(N)} = \frac{M(\text{Maximum permissible moment})(\text{N.m})}{L \times 10^{-3}}$ Unit conversion constant | In the guide rail of HFK16, the external force of the pitching moment static loads put on the point of L=30mm is f=10 N, 0.68<br>$\text{Allowable load } F = \frac{0.68}{30 \times 10^{-3}} = 22.7(\text{N})$<br>Actual load f=10(N) < 22.7(N)<br>To meet the using requirements |
| 10        | 87                               | 58  | 87   | 0.26                        | 0.26 | 0.53 |   |  |

### Installation and application

1. Due to the abrupt changes, the circuit pressure is low, which will lead to the decrease of the gripping force and falling of the work-pieces. In order to avoid the harm to the human body and damage to the equipment, anti-dropping device must be equipped.
2. Don't use the air gripper under strong external force and impact force.
3. Please contact with us when the single acting type clamps only with the spring force.
4. When install and fix the air gripper, avoid falling down, collision and damage.
5. When fixing the gripping jaw parts, don't twist the gripping jaw.
6. There are several kinds of installation method, and the locking torque of fastening screw must be within the prescribed torque range shown in the below chart. If the locking torque is too large, it will cause the dysfunctional. If the locking torque is too small, it will cause the position deviation and fall.

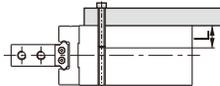

#### Tail installation type

The bore of the tail is used for mounting and positioning

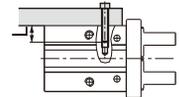

| Bore size | The bolts type | Max. locking moment | Max. screwed depth | The aperture of the positioning bore | The depth of the positioning bore |
|-----------|----------------|---------------------|--------------------|--------------------------------------|-----------------------------------|
| 10        | M3×0.5         | 0.88N.m             | 6mm                | Φ11mm $^{+0.05}_0$                   | 1.5mm                             |
| 16        | M4×0.7         | 2.1N.m              | 8mm                | Φ17mm $^{+0.05}_0$                   | 1.5mm                             |
| 20        | M5×0.8         | 4.3N.m              | 10mm               | Φ21mm $^{+0.05}_0$                   | 2mm                               |
| 25        | M6×1.0         | 7.3N.m              | 12mm               | Φ26mm $^{+0.05}_0$                   | 2mm                               |
| 32        | M6×1.0         | 7.9N.m              | 12mm               | Φ34mm $^{+0.05}_0$                   | 2.5mm                             |
| 40        | M8×1.25        | 17.7N.m             | 16mm               | Φ42mm $^{+0.05}_0$                   | 2.5mm                             |

#### The installation of the front threaded hole

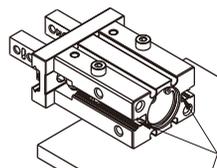

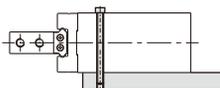

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 6         | M3×0.5         | 0.88                    | 10                     |
| 10        | M3×0.5         | 0.69                    | 5                      |
| 16        | M4×0.7         | 2.1                     | 7                      |
| 20        | M5×0.8         | 4.3                     | 8                      |
| 25        | M6×1.0         | 7.3                     | 10                     |
| 32        | M6×1.0         | 7.9                     | 12                     |
| 40        | M8×1.25        | 17.7                    | 12                     |

#### Surface installation type

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 10        | M3×0.5         | 0.9                     | 6                      |
| 16        | M4×0.7         | 1.6                     | 4.5                    |
| 20        | M5×0.8         | 3.3                     | 8                      |
| 25        | M6×1.0         | 5.9                     | 10                     |
| 32        | M6×1.0         | 5.9                     | 10                     |
| 40        | M8×1.25        | 13.7                    | 12                     |

#### The installation of the front through hole

When installed from front through holes, sensors can not be installed in the sensor grooves that are interfered by screws.

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 6         | M2.5×0.45      | 0.49                    | -                      |
| 10        | M2.5×0.45      | 0.49                    | 5                      |
| 16        | M3×0.5         | 0.88                    | 8                      |
| 20        | M4×0.7         | 2.1                     | 10                     |
| 25        | M5×0.8         | 4.3                     | 12                     |
| 32        | M5×0.8         | 4.3                     | 13                     |
| 40        | M6×1.0         | 7.3                     | 16                     |

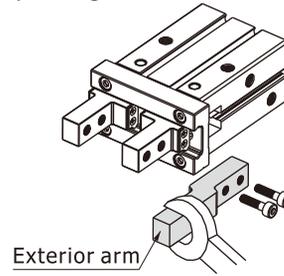

# Air gripper(parallel style)

## HFZ,HFK,HFKL Series

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$ ,  $\Phi 32$ ,  $\Phi 40$

7. The installation method of the gripping jaw fittings When install the gripping jaw fittings, you have to pay particular attention that you can only hold the gripping jaw by using spanner, and then lock the screws with allen wrench. Never clamp the body directly and then lock the screws, otherwise the parts will be easily damaged.

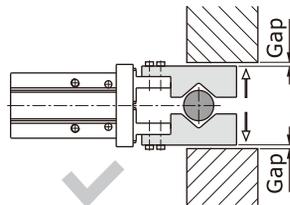

| Bore size | The bolts type | Max. locking moment(Nm) |
|-----------|----------------|-------------------------|
| 6         | M2×0.4         | 0.15                    |
| 10        | M2.5×0.45      | 0.31                    |
| 16        | M3×0.5         | 0.59                    |
| 20        | M4×0.7         | 1.4                     |
| 25        | M5×0.8         | 2.8                     |
| 32        | M6×1.0         | 4.9                     |
| 40        | M8×1.25        | 11.8                    |

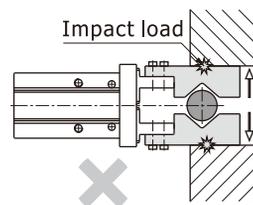

8. Confirm that there is no external forces exerted on the gripping jaw.

Transverse load acts on the gripping jaw, which will cause impact load and leads to the shaking and damage of gripping jaw. Equip with gaps so that the air gripper will not crash into work-pieces and accessories at the end of its trip.

8.1) The end of stroke under the open state of air gripper

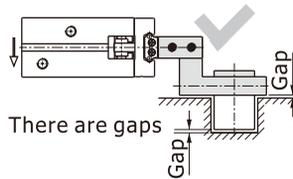

There are gaps

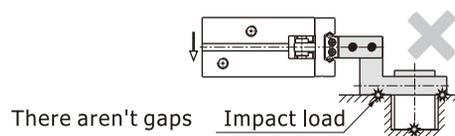

There aren't gaps

8.2) The end of stroke under the move state of air gripper

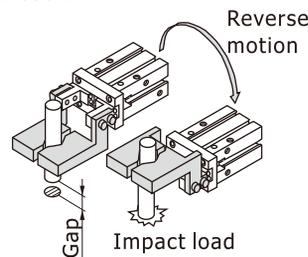

There are gaps

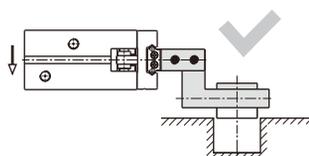

There aren't gaps

8.3) Reverse motion state

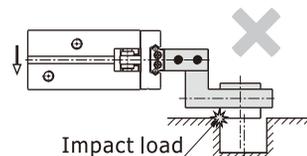

When reverse motion state, the gripping point must be precision, otherwise in the reverse motion state the air gripper maybe impact with ambience and will cause impact load .

9. When the work-pieces are inserted, the center line should be coaxial, no offset, in case there are external force generated on gripping jaw. When testing, it is specially required that the manual operation should be reduced, the pressure should be used to run it at a low speed, and guarantee the safety and no impact.

Center coaxial

Impact load  
Center offset

10. Please use the flow control valve to adjust the opening and closing speed of gripping jaw if too fast.

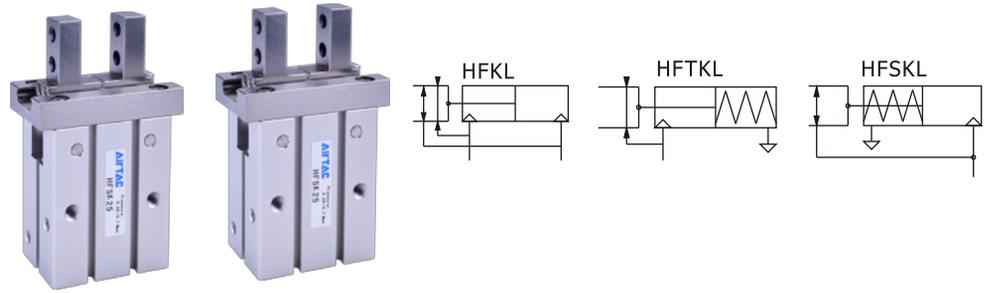

11. People can not enter the movement path of air gripper and articles can not be placed on the path too.

12. Before removing the air gripper, please confirm that it is out of working state, and then discharge of compressed air.

### Ordering code

**HFC Y 20**

#### ① Model

HFC: Air finger  
(Double acting, parallel type)

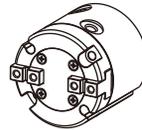

#### ③ Bore size

16 20 25 32 40 50 63

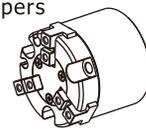

HFC series are all attached with magnet.

#### ② Finger type

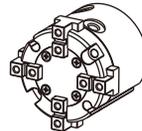

I : Two grippers

Y : Three grippers

X : Four grippers

### Product feature

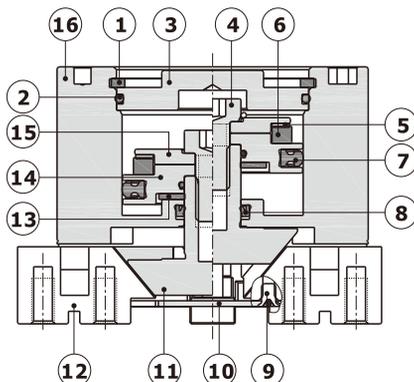

1. Uniform block is adopted in the interior of the air gripper to afford larger gripper force.
2. The bumper is adopted in the front of piston, which can reduce the noise of metal bump.
3. A positioning hole is attached to the bottom of the body, which can improve the precision and the consistency of repeated dismounting and positioning.
4. Precision repeating snatch which adopted roboticized equipment.
5. Kinds of series and styles for you to choice which snatch multiform workpiece.

### Specification

| Bore size (mm)     | 16   | 20 | 25 | 32                     | 40 | 50 | 63 |

|            | HFCX25                                       | 35       | 31   | 6  |
|            | HFCX32                                       | 61       | 55   | 8  |
|            | HFCX40                                       | 97       | 88   | 8  |
|            | HFCX50                                       | 153      | 140  | 12 |
|            | HFCX63                                       | 268      | 251  | 16 |

Note) The gripping force in the above table is in the working pressure of 75psi, and with a gripping point of L=20mm(Φ16~Φ25) or L=30mm(Φ32~Φ63).

Add) Please refer to page 468 for the definition of "L".

### How to select product

Please select pneumatic finger according to the following steps:

#### ① The selection of the effective gripping force

#### ② the confirmation of the gripping point

##### 1. The selection of the gripping force

The gripping work-pieces shown below, on the impact condition of ordinary handling state, taking safety coefficient a=4, have a gripping force that is more than 10-20 times of the mass of the gripped objects.

|  | The work-pieces as shown in the left :<br><br>n: number of gripper<br>F: Gripping force (N)<br>μ: friction coefficient between fittings and work-pieces.<br>m: mass of work-pieces<br>g: acceleration of gravity (=9.8m/s <sup>2</sup> ) | The condition that the work-pieces won't drop is: $n \times \mu F > mg$ |   |
|--|--|---|---|
|  |  | $so: F > \frac{mg}{n \times \mu}$                                       | Safety coefficient is a, so F is:<br>$F = \frac{mg}{n \times \mu} \times a$ |
|  |  | $F = \frac{mg}{2 \times 0.2} \times 4 = 10 \times mg$                   | $F = \frac{mg}{2 \times 0.1} \times 4 = 20 \times mg$                       |
|  |  | 10 times of the mass of the gripped objects                             | 20 times of the mass of the gripped objects                                 |

Note) If the friction coefficient  $\mu > 0.2$ , for safety, please also select clamping force according to the principle of 10~20 times of the mass of the clamped objects. As for large acceleration and shock, it requires for greater safety coefficient.

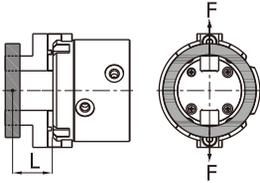

1.1) The actual gripping force must be within the effective gripping forces of different pneumatic fingers specifications shown in the below chart.

### Installation and application

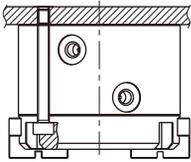

1. Due to the abrupt changes, the circuit pressure is low, which will lead to the decrease of the gripping force and falling of the work-pieces. In order to avoid the harm to the human body and damage to the equipment, anti-dropping device must be equipped.
2. Don't use the air gripper under strong external force and impact force.
3. When install and fix the air gripper, avoid falling down, collision and damage.
4. When fixing the gripping jaw parts, don't twist the gripping jaw.
5. There are several kinds of installation method, and the locking torque of fastening screw must be within the prescribed torque range shown in the below chart. If the locking torque is too large, it will cause the dysfunctional. If the locking torque is too small, it will cause the position deviation and fall.

#### Tail installation type

| Model        | Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) | The aperture of the positioning bore(mm) | The depth of the positioning bore(mm) |

#### 6. The installation method of the gripping jaw fittings

When install the gripping jaw fittings, you have to pay particular attention that you can only hold the gripping jaw by using spanner, and then lock the screws with allen wrench. Never clamp the body directly and then lock the screws, otherwise the parts will be easily damaged.

#### Install the gripping jaw fittings

| Bore size | The bolts type | Max. locking moment(Nm) |
|-----------|----------------|-------------------------|
| 16        | M3×0.5         | 0.59                    |
| 20        | M3×0.5         | 0.59                    |
| 25        | M3×0.5         | 0.59                    |
| 32        | M4×0.7         | 1.4                     |
| 40        | M4×0.7         | 1.4                     |
| 50        | M5×0.8         | 2.8                     |
| 63        | M5×0.8         | 2.8                     |

| HFK25R     | 23 <sup>+2.5</sup> <sub>0</sub> | 9 <sup>0</sup> <sub>-1</sub>   |

### How to select product

Please select pneumatic finger according to the following steps:

#### 1. The selection of the gripping force

The gripping work-pieces shown below, on the impact condition of ordinary handling state, taking safety coefficient  $a=4$ , have a gripping force that is more than 10-20 times of the mass of the gripped objects.

| The work-pieces as shown in the left :  |   | $\mu=0.2$   | $\mu=0.1$   |
|---|---|---|---|
| <p>                     F: Gripping force (N)<br/> <math>\mu</math>: friction coefficient between fittings and work-pieces.<br/>                     m: mass of work-pieces<br/>                     g: acceleration of gravity (<math>=9.8m/s^2</math>)                 </p> | The condition that the work-pieces won't drop is: $2 \times \mu F > mg$<br>so: $F > \frac{mg}{2 \times \mu}$<br>Safety coefficient is a, so F is:<br>$F = \frac{mg}{2 \times \mu} \times a$ | $F = \frac{mg}{2 \times 0.2} \times 4 = 10 \times mg$ | $F = \frac{mg}{2 \times 0.1} \times 4 = 20 \times mg$ |
|   |   | 10 times of the mass of the gripped objects           | 20 times of the mass of the gripped objects           |

Note) If the friction coefficient  $\mu > 0.2$ , for safety, please also select clamping force according to the principle of 10~20 times of the mass of the clamped objects. As for large acceleration and shock, it requires for greater safety coefficient.

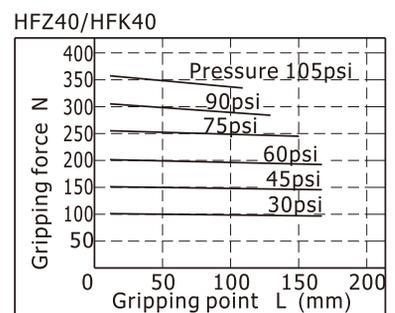

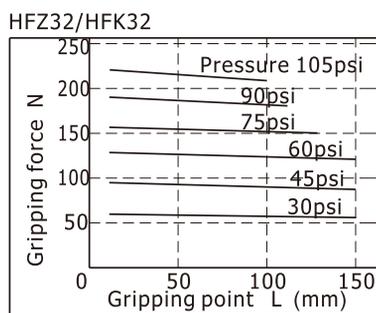

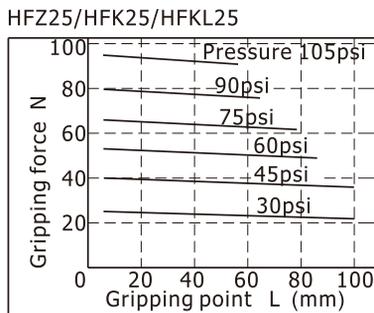

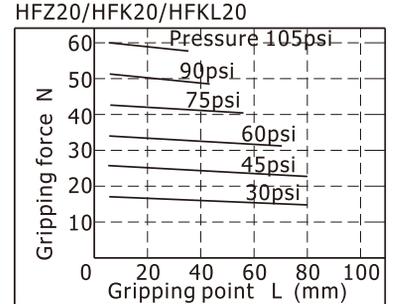

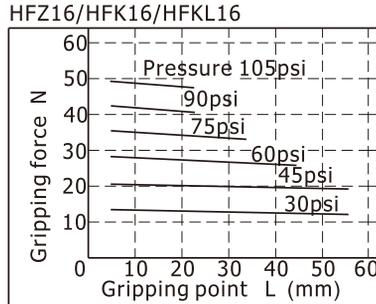

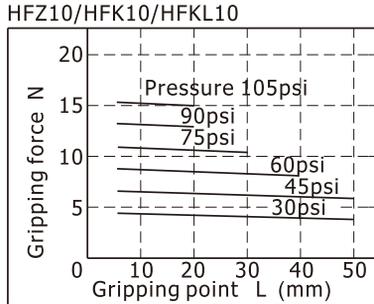

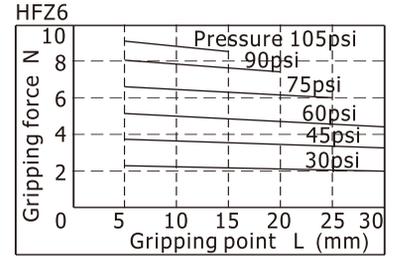

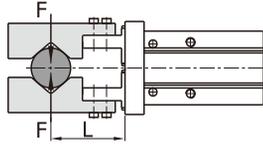

1.1) The actual gripping force must be within the effective gripping forces of different pneumatic fingers specifications shown in the below chart.

# Air gripper(parallel style)

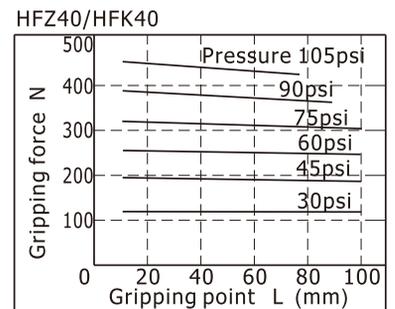

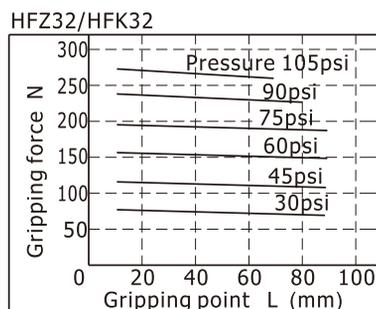

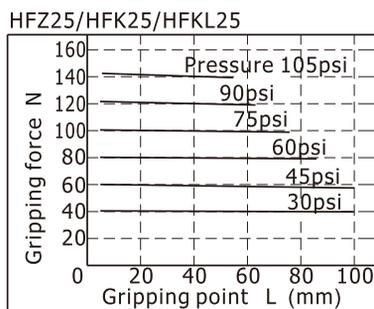

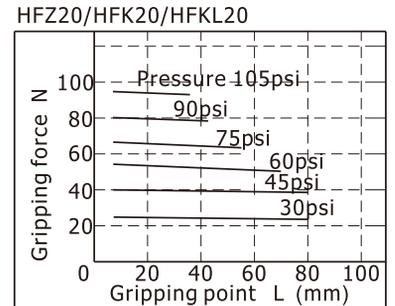

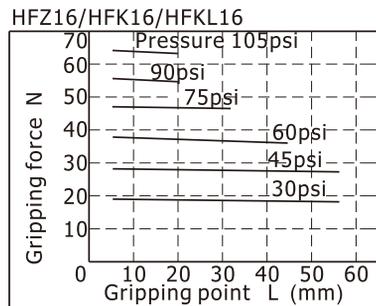

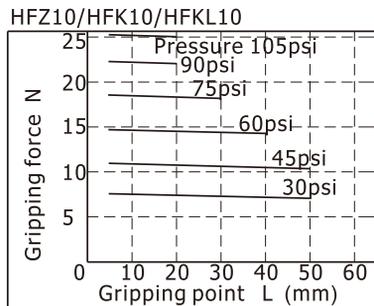

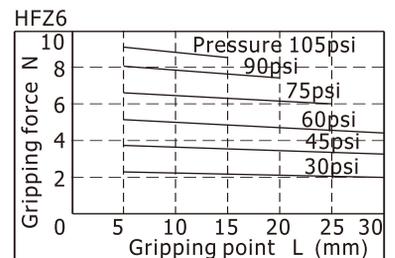

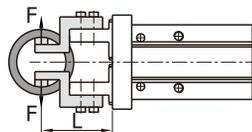

## HFZ,HFK,HFKL Series

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$ ,  $\Phi 32$ ,  $\Phi 40$

### Double acting type closed gripping force

### Double acting type opened gripping force

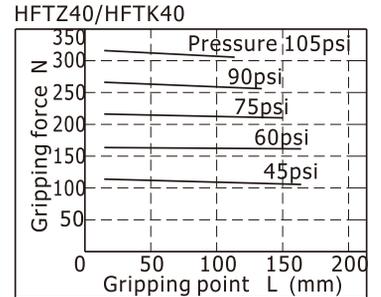

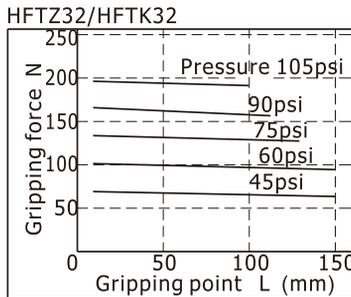

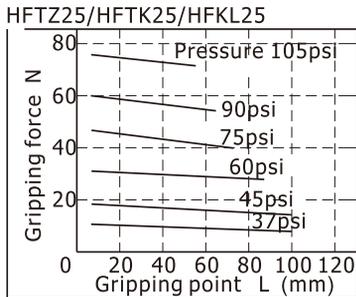

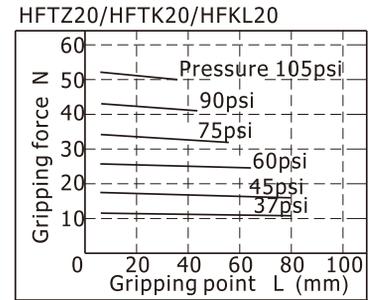

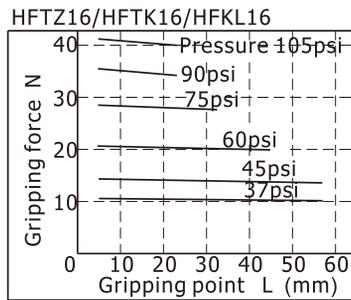

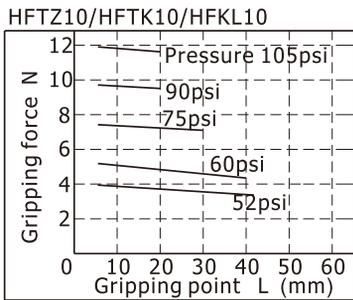

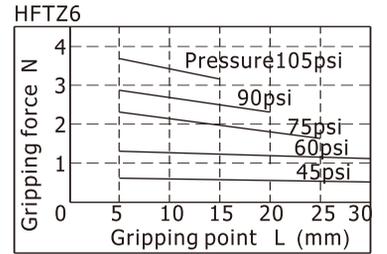

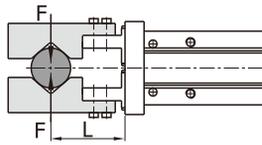

# Air gripper(parallel style)

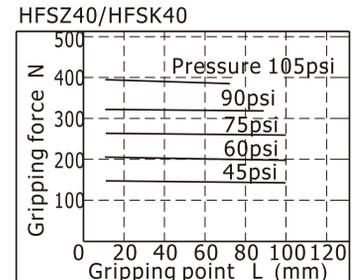

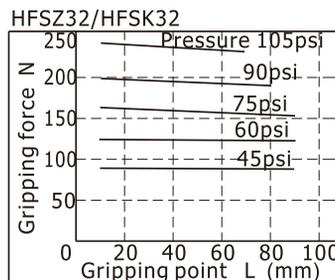

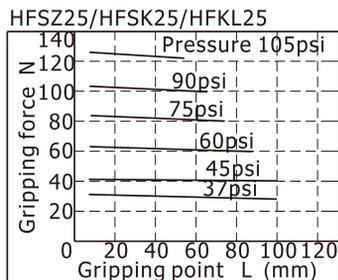

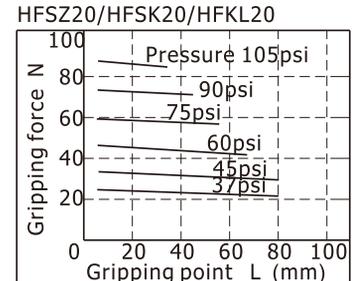

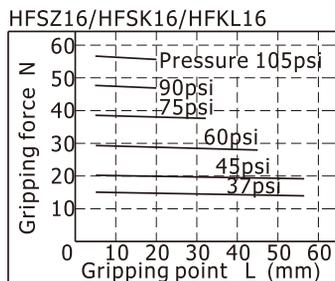

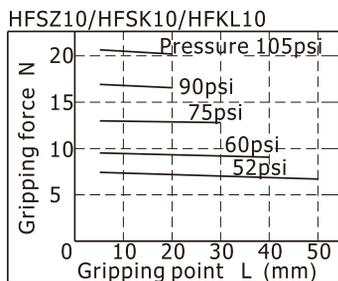

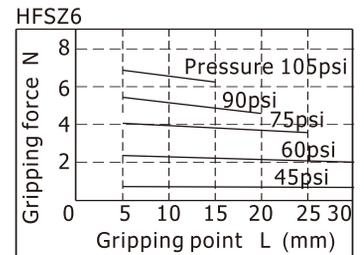

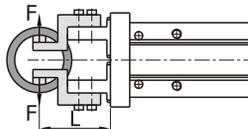

## HFZ,HFK,HFKL Series

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$ ,  $\Phi 32$ ,  $\Phi 40$

### Single acting normally opened gripping force

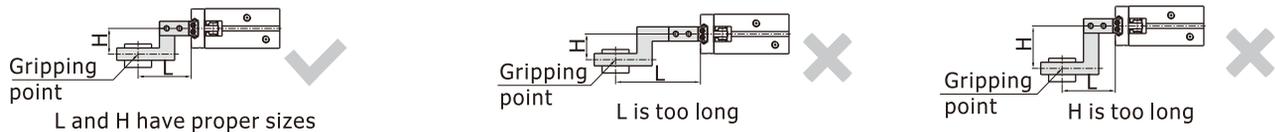

### Single acting normally closed clamping force

### 2. The selection of the gripping point

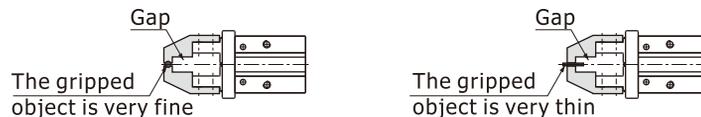

2.1) Please select the gripping point within the limited field shown below.

Over the limits, gripping jaws would be subjected to excessive torque loads, and lead to short life of the air gripper.

2.2) In the allowable range of gripping point, it is better to design for short and light fittings. If the fittings are long and heavy, the inertia force when the finger is open and close will become larger, and the performance of gripping jaw will be degraded, at the same time it will affect the life.

2.3) When the gripped object is very fine and thin, you have to equip with gap between fittings. If not, there will be unstable clamp, resulting in a position offset and adverse clamping and so on.

### 3. The confirmation of the external force put on the gripping jaw.

| Bore size | The allowed vertical loads Fv(N) |     |      | Max. permissible torque(Nm) |      |      | The calculation of allowable forces when moment loads work  | Examples of calculation  |
|-----------|----------------------------------|-----|------|-----------------------------|------|------|---|--|
|           | HFK                              | HFZ | HFKL | Mp                          | My   | Mr   |   |  |

### Installation and application

1. Due to the abrupt changes, the circuit pressure is low, which will lead to the decrease of the gripping force and falling of the work-pieces. In order to avoid the harm to the human body and damage to the equipment, anti-dropping device must be equipped.
2. Don't use the air gripper under strong external force and impact force.
3. Please contact with us when the single acting type clamps only with the spring force.
4. When install and fix the air gripper, avoid falling down, collision and damage.
5. When fixing the gripping jaw parts, don't twist the gripping jaw.
6. There are several kinds of installation method, and the locking torque of fastening screw must be within the prescribed torque range shown in the below chart. If the locking torque is too large, it will cause the dysfunctional. If the locking torque is too small, it will cause the position deviation and fall.

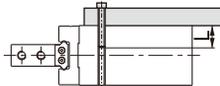

#### Tail installation type

The bore of the tail is used for mounting and positioning

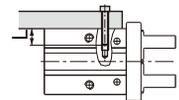

| Bore size | The bolts type | Max. locking moment | Max. screwed depth | The aperture of the positioning bore                     | The depth of the positioning bore |
|-----------|----------------|---------------------|--------------------|--|-----------------------------------|
| 10        | M3×0.5         | 0.88N.m             | 6mm                | Φ11mm $\begin{smallmatrix} +0.05 \\ 0 \end{smallmatrix}$ | 1.5mm                             |
| 16        | M4×0.7         | 2.1N.m              | 8mm                | Φ17mm $\begin{smallmatrix} +0.05 \\ 0 \end{smallmatrix}$ | 1.5mm                             |
| 20        | M5×0.8         | 4.3N.m              | 10mm               | Φ21mm $\begin{smallmatrix} +0.05 \\ 0 \end{smallmatrix}$ | 2mm                               |
| 25        | M6×1.0         | 7.3N.m              | 12mm               | Φ26mm $\begin{smallmatrix} +0.05 \\ 0 \end{smallmatrix}$ | 2mm                               |
| 32        | M6×1.0         | 7.9N.m              | 12mm               | Φ34mm $\begin{smallmatrix} +0.05 \\ 0 \end{smallmatrix}$ | 2.5mm                             |
| 40        | M8×1.25        | 17.7N.m             | 16mm               | Φ42mm $\begin{smallmatrix} +0.05 \\ 0 \end{smallmatrix}$ | 2.5mm                             |

#### The installation of the front threaded hole

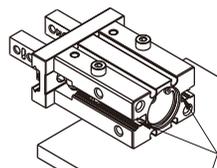

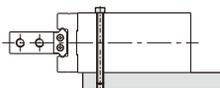

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 6         | M3×0.5         | 0.88                    | 10                     |
| 10        | M3×0.5         | 0.69                    | 5                      |
| 16        | M4×0.7         | 2.1                     | 7                      |
| 20        | M5×0.8         | 4.3                     | 8                      |
| 25        | M6×1.0         | 7.3                     | 10                     |
| 32        | M6×1.0         | 7.9                     | 12                     |
| 40        | M8×1.25        | 17.7                    | 12                     |

#### Surface installation type

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 10        | M3×0.5         | 0.9                     | 6                      |
| 16        | M4×0.7         | 1.6                     | 4.5                    |
| 20        | M5×0.8         | 3.3                     | 8                      |
| 25        | M6×1.0         | 5.9                     | 10                     |
| 32        | M6×1.0         | 5.9                     | 10                     |
| 40        | M8×1.25        | 13.7                    | 12                     |

#### The installation of the front through hole

When installed from front through holes, sensors can not be installed in the sensor grooves that are interfered by screws.

| Bore size | The bolts type | Max. locking moment(Nm) | Max. screwed depth(mm) |
|-----------|----------------|-------------------------|------------------------|
| 6         | M2.5×0.45      | 0.49                    | -                      |
| 10        | M2.5×0.45      | 0.49                    | 5                      |
| 16        | M3×0.5         | 0.88                    | 8                      |
| 20        | M4×0.7         | 2.1                     | 10                     |
| 25        | M5×0.8         | 4.3                     | 12                     |
| 32        | M5×0.8         | 4.3                     | 13                     |
| 40        | M6×1.0         | 7.3                     | 16                     |

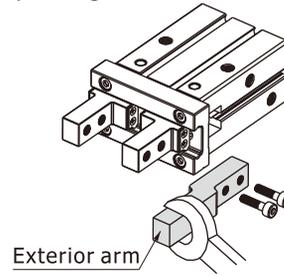

# Air gripper(parallel style)

## HFZ,HFK,HFKL Series

Bore size:  $\Phi 10$ ,  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$ ,  $\Phi 32$ ,  $\Phi 40$

7. The installation method of the gripping jaw fittings When install the gripping jaw fittings, you have to pay particular attention that you can only hold the gripping jaw by using spanner, and then lock the screws with allen wrench. Never clamp the body directly and then lock the screws, otherwise the parts will be easily damaged.

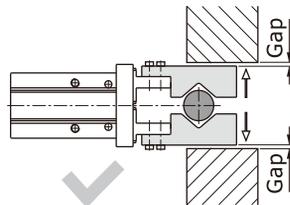

| Bore size | The bolts type | Max. locking moment(Nm) |
|-----------|----------------|-------------------------|
| 6         | M2×0.4         | 0.15                    |
| 10        | M2.5×0.45      | 0.31                    |
| 16        | M3×0.5         | 0.59                    |
| 20        | M4×0.7         | 1.4                     |
| 25        | M5×0.8         | 2.8                     |
| 32        | M6×1.0         | 4.9                     |
| 40        | M8×1.25        | 11.8                    |

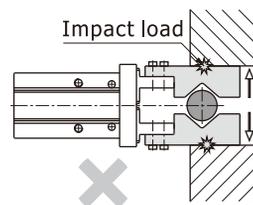

8. Confirm that there is no external forces exerted on the gripping jaw.

Transverse load acts on the gripping jaw, which will cause impact load and leads to the shaking and damage of gripping jaw. Equip with gaps so that the air gripper will not crash into work-pieces and accessories at the end of its trip.

8.1) The end of stroke under the open state of air gripper

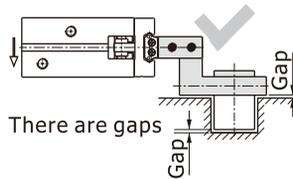

There are gaps

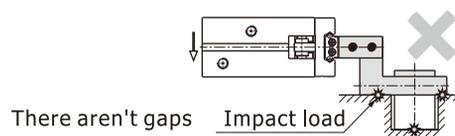

There aren't gaps

8.2) The end of stroke under the move state of air gripper

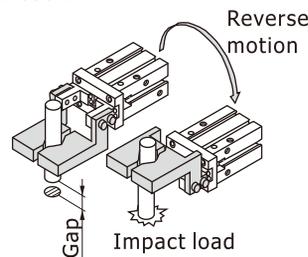

There are gaps

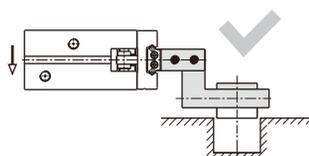

There aren't gaps

8.3) Reverse motion state

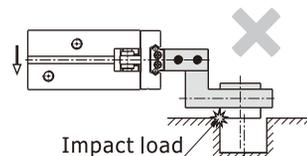

When reverse motion state, the gripping point must be precision, otherwise in the reverse motion state the air gripper maybe impact with ambience and will cause impact load .

9. When the work-pieces are inserted, the center line should be coaxial, no offset, in case there are external force generated on gripping jaw. When testing, it is specially required that the manual operation should be reduced, the pressure should be used to run it at a low speed, and guarantee the safety and no impact.

Center coaxial

Impact load  
Center offset

10. Please use the flow control valve to adjust the opening and closing speed of gripping jaw if too fast.

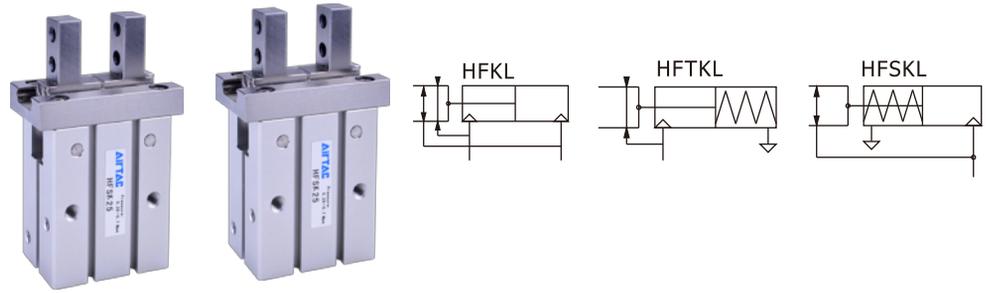

11. People can not enter the movement path of air gripper and articles can not be placed on the path too.

12. Before removing the air gripper, please confirm that it is out of working state, and then discharge of compressed air.

# Air gripper—HFKL Series

## Parallel style with guide track—Roller bearing and longer stroke

### Ordering code

**HFKL 20** □

①      ②      ③

#### ① Model

HFKL: Air finger(Double acting/Longer stroke)

HFSKL: Air finger(Single acting and normally closed/Longer stroke)

HFTKL: Air finger(Single acting and normally opened/Longer stroke)

#### ② Bore size

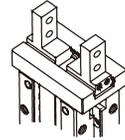

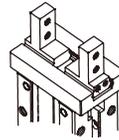

10 16 20 25

HFKL series are all attached with magnet.  
Sensor should be ordered individually.

#### ③ Finger type

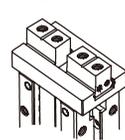

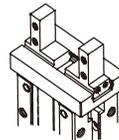

Blank: Standard

N: Thru.hole mounting type

B: Side mounting type

F: Bottom mounting type

### Specification

[Note] Refer to P535 for detail of sensor.

## HFCQ Series

Bore size:  $\Phi 16$ ,  $\Phi 20$ ,  $\Phi 25$ ,  $\Phi 32$ ,  $\Phi 40$ ,  $\Phi 50$ ,  $\Phi 63$

### Specification of Cylinder push rod mechanism

| Model                | HFCQ32E  | HFCQ40E                | HFCQ50E | HFCQ63E |
|----------------------|--|------------------------|---------|---------|
| Acting type          | Double acting                                    |                        |         |         |
| Fluid                | Air(to be filtered by 40 $\mu$ m filter element) |                        |         |         |
| Operating pressure   | 28~100psi(0.2~0.7MPa)                            | 22~100psi(0.15~0.7MPa) |         |         |
| Temperature          | -20~70 °C  |                        |         |         |
| Lubrication          | Not required                                     |                        |         |         |
| Push stroke mm       | 7  | 8                      | 14      | 15      |
| Max. frequency       | 60(c.p.m)  |                        |         |         |
| Sensor switches      | CM5H/DMSH/EMSH                                   |                        |         |         |
| Push force N(0.5MPa) | 45   | 130                    | 204     | 335     |
| Weight g             | 560  | 790                    | 1350    | 2280    |

### Specification of Spring push rod mechanism

| Model               | HFCQ32V | HFCQ40V | HFCQ50V | HFCQ63V |
|---------------------|---------|---------|---------|---------|
| Push stroke mm      | 7       | 8       | 14      | 15      |
| Push spring force N | 5~12    | 9~18    | 16~31   | 24~40   |
| Weight g            | 530     | 730     | 1270    | 2190    |

### Gripping force and stroke

| Model  | Gripping force per finger Effective valve(N) |          | Opening/Closing stroke (Both sides)(mm) | Weight (g) |
|--------|--|----------|---|------------|
|        | Internal                                     | External |   |            |
| HFCQ16 | 15   | 9        | 4                                       | 100        |
| HFCQ20 | 26   | 21       | 4                                       | 140        |
| HFCQ25 | 45   | 36       | 6                                       | 220        |
| HFCQ32 | 77   | 62       | 8                                       | 430        |
| HFCQ40 | 118  | 97       | 8                                       | 560        |
| HFCQ50 | 187  | 155      | 12                                      | 950        |
| HFCQ63 | 329  | 280      | 16                                      | 1600       |

Note) The gripping force in the above table is in the working pressure of 75psi, and with a gripping point of L=20mm( $\Phi 16\sim\Phi 25$ ) or L=30mm( $\Phi 32\sim\Phi 63$ ).

Add) Please refer to page 482 for the definition of "L".

### How to select product

Please select pneumatic finger according to the following steps:

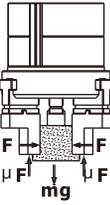

#### ① The selection of the effective gripping force

#### ② the confirmation of the gripping point

##### 1. The selection of the gripping force

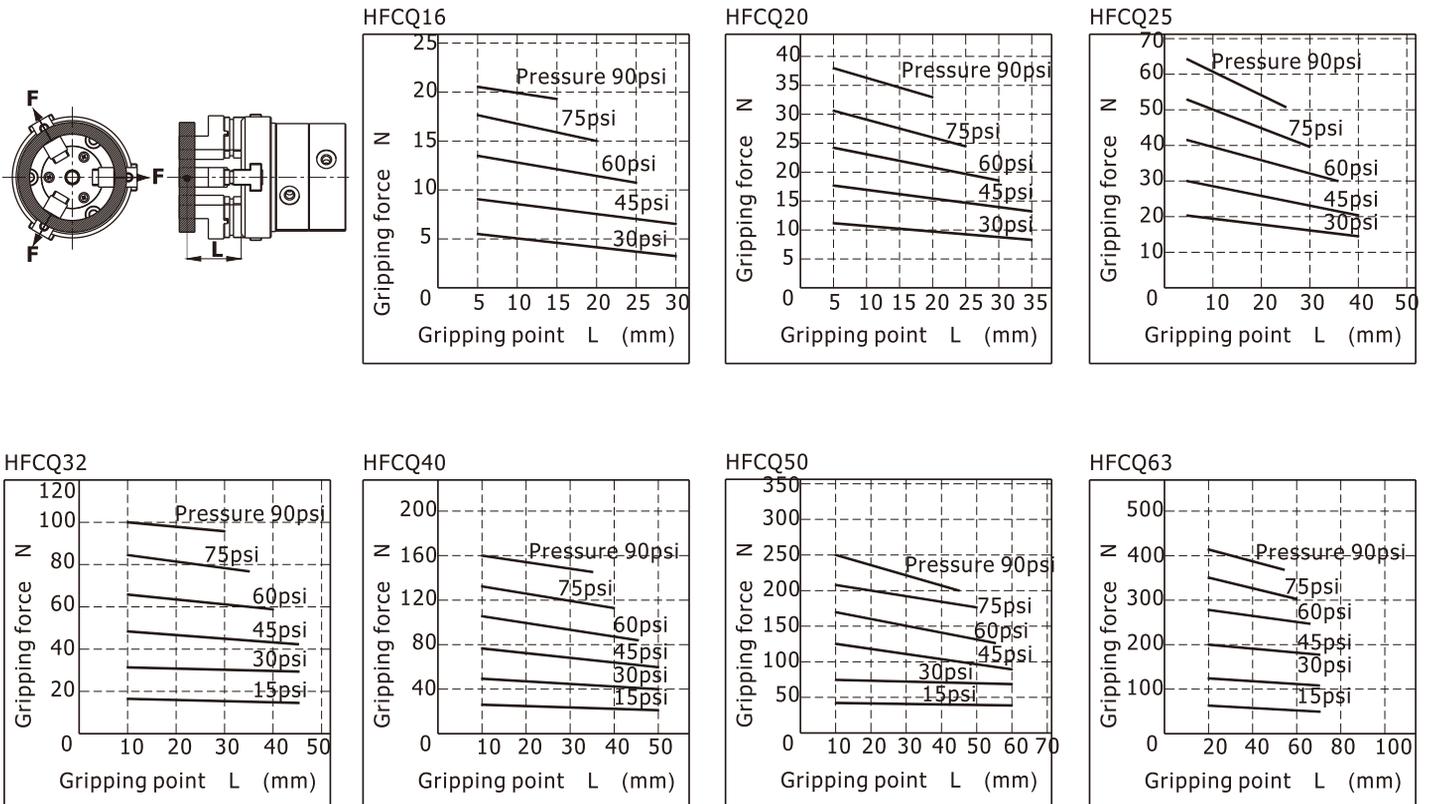

The gripping work-pieces shown below, on the impact condition of ordinary handling state, taking safety coefficient  $a=4$ , have a gripping force that is more than 10-20 times of the mass of the gripped objects.

| The work-pieces as shown in the left :  |   | $\mu=0.2$   | $\mu=0.1$   |
|---|---|---|---|
|  <p>n: number of gripper<br/>F: Gripping force (N)<br/><math>\mu</math>: friction coefficient between fittings and work-pieces.<br/>m: mass of work-pieces<br/>g: acceleration of gravity (<math>=9.8m/s^2</math>)</p> | <p>The condition that the work-pieces won't drop is: <math>n \times \mu F &gt; mg</math></p> <p>so: <math>F &gt; \frac{mg}{n \times \mu}</math></p> <p>Safety coefficient is a, so F is:</p> $F = \frac{mg}{n \times \mu} \times a$ | $F = \frac{mg}{2 \times 0.2} \times 4 = 10 \times mg$ | $F = \frac{mg}{2 \times 0.1} \times 4 = 20 \times mg$ |
|   |   | <p>10 times of the mass of the gripped objects</p>    | <p>20 times of the mass of the gripped objects</p>    |

Note) If the friction coefficient  $\mu > 0.2$ , for safety, please also select clamping force according to the principle of 10~20 times of the mass of the clamped objects. As for large acceleration and shock, it requires for greater safety coefficient.

1.1) The actual gripping force must be within the effective gripping forces of different pneumatic fingers specifications shown in the below chart.

### Installation and application

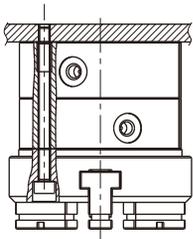

1. Due to the abrupt changes, the circuit pressure is low, which will lead to the decrease of the gripping force and falling of the work-pieces. In order to avoid the harm to the human body and damage to the equipment, anti-dropping device must be equipped.
2. Don't use the air gripper under strong external force and impact force.
3. When install and fix the air gripper, avoid falling down, collision and damage.
4. When fixing the gripping jaw parts, don't twist the gripping jaw.
5. There are several kinds of installation method, and the locking torque of fastening screw must be within the prescribed torque range shown in the below chart. If the locking torque is too large, it will cause the dysfunctional. If the locking torque is too small, it will cause the position deviation and fall.

#### Tail installation type

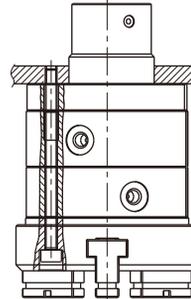

| Bore size | The bolts type | Max. locking moment(N.m) | Max. screwed depth(mm) | The aperture of the positioning bore(mm) | The depth of the positioning bore(mm) |
|-----------|----------------|--------------------------|------------------------|--|---------------------------------------|
| 16        | M4×0.7         | 2.1                      | 8                      | Φ17 <sup>+0.05</sup> <sub>0</sub>        | 1.5                                   |

#### The installation of the front through hole

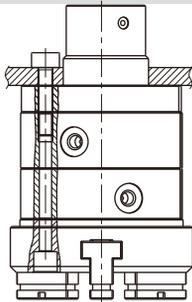

| Bore size | The bolts type | Max. locking moment(N.m) |
|-----------|----------------|--------------------------|
| 16        | M3×0.5         | 0.88                     |
| 20        | M3×0.5         | 0.88                     |
| 25        | M3×0.5         | 0.88                     |
| 32        | M4×0.7         | 2.1                      |
| 40        | M4×0.7         | 2.1                      |
| 50        | M5×0.8         | 4.3                      |
| 63        | M6×1.0         | 7.3                      |

#### The installation of the front through hole(with push rod)

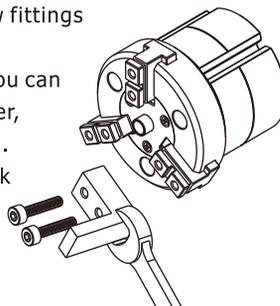

| Bore size | The bolts type | Max. locking moment(N.m) |
|-----------|----------------|--------------------------|
| 32        | M4×0.7         | 2.1                      |
| 40        | M4×0.7         | 2.1                      |
| 50        | M5×0.8         | 4.3                      |
| 63        | M6×1.0         | 7.3                      |

#### Tail installation type(with push rod)

| Bore size | The bolts type | Max. locking moment(N.m) | Max. screwed depth(mm) | The aperture of the positioning bore(mm) |
|-----------|----------------|--------------------------|------------------------|--|
| 32        | M5×0.8         | 4.3                      | 10                     | Φ32 <sup>0</sup> <sub>-0.05</sub>        |
| 40        | M5×0.8         | 4.3                      | 10                     | Φ40 <sup>0</sup> <sub>-0.05</sub>        |
| 50        | M6×1.0         | 7.3                      | 12                     | Φ50 <sup>0</sup> <sub>-0.05</sub>        |
| 63        | M8×1.25        | 18                       | 16                     | Φ60 <sup>0</sup> <sub>-0.05</sub>        |

6. The installation method of the gripping jaw fittings  
When install the gripping jaw fittings, you have to pay particular attention that you can only hold the gripping jaw by using spanner, and then lock the screws with allen wrench. Never clamp the body directly and then lock the screws, otherwise the parts will be easily damaged.

#### Install the gripping jaw fittings

| Bore size | The bolts type | Max. locking moment(N.m) |
|-----------|----------------|--------------------------|
| 16        | M3×0.5         | 0.59                     |
| 20        | M3×0.5         | 0.59                     |
| 25        | M3×0.5         | 0.59                     |
| 32        | M4×0.7         | 1.4                      |
| 40        | M4×0.7         | 1.4                      |
| 50        | M5×0.8         | 2.8                      |
| 63        | M5×0.8         | 2.8                      |
